**Table 1223. Automobile Insurance—Average Expenditures Per Insured Vehicle by State: 2000 and 2008**

[In dollars. Average expenditure equals total premiums written divided by liability car-years. A car-year is equal to 365 days of insured coverage for a single vehicle. The average expenditures for automobile insurance in a state are affected by a number of factors, including the underlying rate structure, the coverages purchased, the deductibles and limits selected, the types of vehicles insured, and the distribution of driver characteristics. The NAIC does not rank state average expenditures and does not endorse any conclusions drawn from this data]

<sup>1</sup> Based on the HO-4 renters insurance policy for tenants. Includes broad named-peril coverage for the personal property of tenants. <sup>2</sup> Based on the HO-3 homeowner package policy for owner-occupied dwellings, 1–4 family units. Provides “all risks” coverage (except those specifically excluded in the policy) on buildings, broad named-peril coverage on personal property, and is the most common package written. <sup>3</sup> The Texas Insurance Commissioner promulgates residential policy forms which are similar but not identical to the standard forms.

## Section 26

# Arts, Recreation, and Travel

---

This section presents data on the arts, entertainment, and recreation economic sector of the economy, and personal recreational activities, the arts and humanities, and domestic and foreign travel.

**Arts, Entertainment, and Recreation Industry**—The U.S. Census Bureau surveys—*County Business Patterns*, *Economic Census*, *Nonemployer Statistics* and *Service Annual Survey*, provide data on the *Arts, Entertainment, and Recreation Sector*. The *County Business Patterns* annual data includes number of establishments, number of employees, first quarter and annual payrolls, and number of establishments by employment size class. The *Economic Census*, conducted every five years for the years ending ‘2’ and ‘7,’ provides information on the number of establishments, receipts, payroll, and paid employees for the United States and various geographic levels. *Nonemployer statistics* are an annual tabulation of economic data by industry for active businesses without paid employees that are subject to federal income tax. The *Service Annual Survey* provides estimates of operation revenue of taxable firms and revenues and expenses of firms exempt from federal taxes for industries in this sector of the economy. See Appendix III for more details.

**Recreation and leisure activities**—Data on the participation in various recreation and leisure time activities are based on several sample surveys. Data on the public’s involvement with arts events and activities are published by the National Endowment for Arts (NEA). The NEA’s *Survey of Public Participation in the Arts* remains the largest periodic study of arts participation in the United States. The most recent data are from the 2008 survey. Data on participation in

fishing, hunting, and other forms of wildlife associated recreation are published periodically by the U.S. Department of Interior, Fish and Wildlife Service.

The most recent data are from the 2006 survey. Data on participation in various sports recreation activities are published by the National Sporting Goods Association. Mediamark, Inc. also conducts periodic surveys on sports and leisure activities, as well as other topics.

### **Parks and recreation**—

The Department of the Interior has responsibility for administering the national parks. The National Park Service publishes information on visits to national park areas in its annual report, *National Park Statistical Abstract*. *The National Parks: Index (year)* is an annual report which contains brief descriptions, with acreages and visits for each area administered by the service, plus certain “related” areas. This information can be found at: <<http://www.nature.nps.gov/stats>>. Statistics for state parks are compiled by the National Association of State Park Directors.

**Travel**—Statistics on arrivals and departures to the United States, cities and states visited by overseas travelers, and tourism sales and employment are reported by the International Trade Administration (ITA), Office of Travel & Tourism Industries (OTTI). Data on domestic travel and travel expenditures are published by the research department of the U.S. Travel Association. Other data on household transportation characteristics are in Section 23, Transportation.

**Statistical reliability**—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1228. Arts, Entertainment, and Recreation Services—Estimated Revenue: 2004 to 2009

[In millions of dollars (157,914 represents \$157,914,000,000). For taxable and tax-exempt employer firms. Except where indicated, estimates adjusted using the results of the 2007 Economic Census. Based on the Service Annual Survey, see Appendix III]

**Table 1235. Arts and Humanities—Selected Federal Aid Programs: 1990 to 2009**

[In millions of dollars (170.8 represents \$170,800,000), except as indicated. For fiscal year ending September 30. FY 2009 includes funds from the American Recovery and Reinvestment Act]

Type of fund and program	1990	1995	2000	2004	2005	2006	2007	2008	2009
National Endowment for the Arts:									
Funds available <sup>1</sup>	170.8	152.1	85.2	105.5	108.8	112.8	111.7	129.3	186.8
Program appropriation <sup>2</sup>	152.3	138.1	79.6	99.3	99.5	100.7	100.3	119.6	178.1
Grants awarded (number) <sup>3</sup>	4,252	3,534	1,906	2,150	2,161	2,293	2,158	2,219	3,075
Funds obligated <sup>4, 5</sup>	157.6	147.9	83.5	102.6	104.4	107.0	106.5	125.5	176.2
National Endowment for the Humanities:									
Funds available <sup>1</sup>	140.6	152.3	102.6	127.1	119.8	121.5	122.3	128.6	134.5
Program appropriation	114.2	125.7	82.7	98.7	99.9	102.2	102.2	105.7	114.7
Matching funds <sup>6</sup>	26.3	25.7	15.1	15.9	15.9	15.2	15.2	14.3	14.3

<sup>1</sup> Includes other program funds not shown separately. Excludes administrative funds. <sup>2</sup> FY 1990–FY 1996 include Regular Program Funds, Treasury Funds, Challenge Grant Funds, and Policy, Planning, and Research Funds. FY 1997 includes Regular Program Funds, Matching Grant Funds, and Policy, Research and Technology Funds. FY 1998–FY 2000 includes Regular Program Funds and Matching Grant Funds. <sup>3</sup> Excludes cooperative agreements and interagency agreements. <sup>4</sup> Includes obligations for new grants, supplemental awards on previous years' grants, cooperative agreements, and interagency agreements. <sup>5</sup> Beginning with 1997 data, the grantmaking structure changed from discipline-based categories to thematic ones. <sup>6</sup> Represents federal funds obligated only upon receipt or certification by endowment of matching nonfederal gifts. Funds for matching grants are not allocated by program area because they are awarded on a grant-by-grant basis.

**Table 1236. Total State Arts Agency Legislative Appropriations: 2010 to 2011**

[In thousands of dollars (293,188 represents 293,188,000). For fiscal year ending September 30. The National Assembly of State Arts Agencies (NASAA) is the membership organization of the nations' state and jurisdictional arts agencies. Legislative appropriations include funds designated to the state arts agency by state legislatures. These include line items, which are not controlled by the agency but passed through to designated entities. State arts agencies also receive monies from other sources including other state funds, the federal government (primarily the National Endowment for the Arts), private funds, and legislative earmarks. Minus sign (–) indicates decrease in spending]

Table 1249. Participation in Selected Sports Activities: 2009

[In thousands (269,988 represents 269,988,000), except rank. Data are based on a questionnaire mailed to 10,000 households. The questionnaire asked the male and female heads of households and up to two other household members who were at least seven years of age to indicate their age, the sports in which they participated in 2009, and the number of days of participation in 2009. A participant is defined as an individual seven years of age or older who participates in a sport more than once a year. See source for methodology]

<sup>1</sup> Financial data are those associated with the National Park System. Certain other functions of the National Park Service (principally the activities absorbed from the former Heritage Conservation and Recreation Service in 1981) are excluded.  
<sup>2</sup> Includes funds carried over from prior years. <sup>3</sup> For calendar year. Includes other areas, not shown separately. <sup>4</sup> For 1990, combined data for North Cascades National Park and two adjacent National Recreation Areas are included in National Parks total.  
<sup>5</sup> Includes military areas. <sup>6</sup> Federal land only, as of Dec. 31. Federal land acreages, in addition to National Park Service administered lands, also include lands within national park system area boundaries but under the administration of other agencies. Year-to-year changes in the federal lands figures includes changes in the acreages of these other lands and hence often differ from "net acquisition." <sup>7</sup> The decrease in the 2006 land total reflects corrected acreage by the Bureau of Land Management, and not by the National Park Service lands.

Table 1260. North America Cruise Industry in the United States: 2005 to 2009

[The North American passenger cruise industry is defined as those cruise lines that primarily market their cruises in North America. These cruise lines offer cruises with destinations throughout the globe. While most of these cruises originate in ports throughout North America, cruises also originate at ports in other continents]

Item	Unit	2005	2006	2007	2008	2009
<b>Capacity Measures:</b>						
Number of ships	Number	145	151	159	161	167
Lower berths <sup>1</sup>	Number	225,364	244,271	259,973	270,664	284,754
Passenger embarkations, global <sup>2</sup>	1,000	11,500	12,000	12,562	13,006	13,442
United States	1,000	8,612	9,001	9,184	8,958	8,904
Florida	1,000	4,875	4,994	4,977	5,110	5,257
California	1,000	1,301	1,241	1,334	1,436	1,266
New York	1,000	382	512	537	524	420
Other U.S. ports	1,000	2,054	2,254	2,336	1,888	1,961
Canada	1,000	455	423	477	427	450
San Juan	1,000	581	555	534	521	507
Rest of world	1,000	1,852	2,021	2,367	3,100	3,581
<b>United States expenditures of the North American cruise industry <sup>3, 4</sup></b>						
U.S. purchases of the cruise lines	Bil. dol.	11.76	12.89	13.74	14.40	12.67
Passenger and crew	Bil. dol.	3.23	3.48	3.63	3.40	3.31
Wages & taxes paid by cruise lines	Bil. dol.	1.19	1.27	1.33	1.27	1.17

<sup>1</sup> Single beds. <sup>2</sup> Port of departure. <sup>3</sup> See details in the report for the sources of U.S. expenditures of the North American cruise industry. <sup>4</sup> Includes wages and salaries paid to U.S. employees of the cruise lines.

## Accommodation, Food Services, and Other Services

This section presents statistics relating to services other than those covered in the previous few sections (22 to 26) on wholesale and retail trade, transportation, communications, financial services, and recreation services. Data shown for services are classified by kind of business and cover sales or receipts, establishments, employees, payrolls, and other items.

The principal sources of these data are from the U.S. Census Bureau and include the *2007 Economic Census*, annual surveys, and the *County Business Patterns* program. These data are supplemented by data from several sources such as the National Restaurant Association on food and drink sales (Table 1283), the American Hotel & Lodging Association on lodging (Table 1282), and Magna Global on advertising (Table 1279).

Data on these services also appear in several other sections. For instance, labor force employment and earnings data appear in Section 12, Labor Force, Employment, and Earnings; gross domestic product of the industry (Table 670) appears in Section 13, Income, Expenditures, Poverty, and Wealth; and financial data (several tables) from the quarterly *Statistics of Income Bulletin*, published by the Internal Revenue Service, appear in Section 15, Business Enterprise.

**Censuses**—Limited coverage of the service industries started in 1933. Beginning with the 1967 census, legislation provides for a census of each area to be conducted every 5 years (for years ending in “2” and “7”). For more information on the most current census, see the Economic Census, *Guide to Economic Census*, found at <http://www.census.gov/econ/census/guide/index.html>. The industries

covered in the censuses and surveys of business are defined in the *North American Industry Classification System* (NAICS). For information on NAICS, see the Census Web site at <http://www.census.gov/epcd/www/naics.html>.

In general, the 2007 Economic Census has two final series of publications for these sectors: 1) subject series with reports such as product lines, and establishment and firm sizes and 2) geographic reports with individual reports for each state. For information on these series, see the Census Bureau Web site at <http://www.census.gov/econ/census07>.

**Current surveys**—The Service Annual Survey provides annual estimates of nationwide receipts for selected personal, business, leasing and repair, amusement and entertainment, social and health, and other professional service industries in the United States. For selected social, health, and other professional service industries, separate estimates are developed for receipts of taxable firms and revenue and expenses for firms and organizations exempt from federal income taxes. Several service sectors from this survey are covered in other sections of this publication. The estimates for tax exempt firms in these industries are derived from a sample of employer firms only. Estimates obtained from annual and monthly surveys are based on sample data and are not expected to agree exactly with results that would be obtained from a complete census of all establishments. Data include estimates for sampling units not reporting.

**Statistical reliability**—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

**Table 1272. Selected Service-Related Industries—Establishments, Sales, Payroll, and Employees by Kind of Business: 2007**

## Section 28

# Foreign Commerce and Aid

---

This section presents data on the flow of goods, services, and capital between the United States and other countries; changes in official reserve assets of the United States; international investments; and foreign assistance programs.

The Bureau of Economic Analysis publishes current figures on U.S. international transactions and the U.S. international investment position in its monthly *Survey of Current Business*. Statistics for the foreign aid programs are presented by the Agency for International Development (AID) in its annual *U.S. Overseas Loans and Grants and Assistance from International Organizations*.

The principal source of merchandise import and export data is the U.S. Census Bureau. Current data are presented monthly in *U.S. International Trade in Goods and Services report Series FT 900*. The *Guide to Foreign Trade Statistics*, found on the Census Bureau Web site at <<http://www.census.gov/foreign-trade/guide/index.html>>, lists the Census Bureau's monthly and annual products and services in this field. In addition, the International Trade Administration and the Bureau of Economic Analysis present summary as well as selected commodity and country data for U.S. foreign trade on their Web sites: <<http://ita.doc.gov/td/industry/otea/>> and <<http://www.bea.gov/international/index>>, respectively. The merchandise trade data published by the Bureau of Economic Analysis in the *Survey of Current Business* and on the Web include balance of payments adjustments to the Census Bureau data. The U.S. Treasury Department's *Monthly Treasury Statement of Receipts and Outlays of the United States Government* contains information on import duties. The International Trade Commission, U.S. Department of Agriculture (agricultural products), U.S. Department of Energy (mineral fuels, like petroleum and coal), and the U.S. Geological Survey (minerals)

release various reports and specialized products on U.S. trade.

### **International accounts—**

The international transactions tables (Tables 1286 to 1288) show, for given time periods, the transfer of goods, services, grants, and financial assets and liabilities between the United States and the rest of the world. The international investment position table (Table 1289) presents, for specific dates, the value of U.S. investments abroad and of foreign investments in the United States. The movement of foreign and U.S. capital as presented in the balance of payments is not the only factor affecting the total value of foreign investments. Among the other factors are changes in the valuation of assets or liabilities, including changes in prices of securities, defaults, expropriations, and write-offs.

Direct investment abroad means the ownership or control, directly or indirectly, by one person of 10 percent or more of the voting securities of an incorporated business enterprise or an equivalent interest in an unincorporated business enterprise. Direct investment position is the value of U.S. parents' claims on the equity of and receivables due from foreign affiliates, less foreign affiliates' receivables due from their U.S. parents. Income consists of parents' shares in the earnings of their affiliates plus net interest received by parents on intercompany accounts, less withholding taxes on dividends and interest.

**Foreign aid**—Foreign assistance is divided into three major categories—grants (military supplies and services and other grants), credits, and other assistance (through net accumulation of foreign currency claims from the sale of agricultural commodities). *Grants* are transfers for which no payment is expected (other than a limited percentage of the foreign currency “counterpart” funds generated by the grant), or which at most involve an obligation on the part

of the receiver to extend aid to the United States or other countries to achieve a common objective. *Credits* are loan disbursements or transfers under other agreements which give rise to specific obligations to repay, over a period of years, usually with interest. All known returns to the U.S. government stemming from grants and credits (reverse grants, returns of grants, and payments of principal) are taken into account in net grants and net credits, but no allowance is made for interest or commissions.

*Other assistance* represents the transfer of U.S. farm products in exchange for foreign currencies (plus, since enactment of Public Law 87-128, currency claims from principal and interest collected on credits extended under the farm products program), less the government's disbursements of the currencies as grants, credits, or for purchases. The net acquisition of currencies represents net transfers of resources to foreign countries under the agricultural programs, in addition to those classified as grants or credits.

In 1952, economic, technical, and military aid programs were combined under the Mutual Security Act, which in turn was followed by the Foreign Assistance Act passed in 1961. Appropriations to provide military assistance were also made in the Department of Defense Appropriation Act (rather than the Foreign Assistance Appropriation Act) beginning in 1966 for certain countries in Southeast Asia and in other legislation concerning programs for specific countries (such as Israel). Figures on activity under the Foreign Assistance Act as reported in the *Foreign Grants and Credits* series differ from data published by AID or its immediate predecessors, due largely to differences in reporting, timing, and treatment of particular items.

**Exports**—The Census Bureau compiles export data primarily from Shipper's Export Declarations required to be filed with customs officials for shipments leaving the United States. They include U.S. exports under mutual security programs and exclude shipments to U.S. Armed Forces for their own use.

The value reported in the export statistics is generally equivalent to a free along-side ship (f.a.s.) value at the U.S. port of

export, based on the transaction price, including inland freight, insurance, and other charges incurred in placing the merchandise alongside the carrier at the U.S. port of exportation. This value, as defined, excludes the cost of loading merchandise aboard the exporting carrier and also excludes freight, insurance, and any other charges or transportation and other costs beyond the U.S. port of exportation. The country of destination is defined as the country of ultimate destination or country where the merchandise is to be consumed, further processed, or manufactured, as known to the shipper at the time of exportation. When ultimate destination is not known, the shipment is statistically credited to the last country to which the shipper knows the merchandise will be shipped in the same form as exported.

Effective January 1990, the United States began substituting Canadian import statistics for U.S. exports to Canada. As a result of the data exchange between the United States and Canada, the United States has adopted the Canadian import exemption level for its export statistics based on shipments to Canada.

Data are estimated for shipments valued under \$2,501 to all countries, except Canada, using factors based on the ratios of low-valued shipments to individual country totals.

Prior to 1989, exports were based on Schedule B, Statistical Classification of Domestic and Foreign Commodities Exported from the United States. Beginning in 1989, Schedule B classifications are based on the Harmonized System and coincide with the Standard International Trade Classification, Revision 3. This revision will affect the comparability of most export series beginning with the 1989 data for commodities.

**Imports**—The Census Bureau compiles import data from various customs forms required to be filed with customs officials. Data on import values are presented on two valuations bases in this section: The c.i.f. (cost, insurance, and freight) and the customs import value (as appraised by the U.S. Customs Service in accordance

with legal requirements of the Tariff Act of 1930, as amended). This latter valuation, primarily used for collection of import duties, frequently does not reflect the actual transaction value. Country of origin is defined as country where the merchandise was grown, mined, or manufactured. If country of origin is unknown, country of shipment is reported.

Imports are classified either as "General imports" or "Imports for consumption." *General imports* are a combination of entries for immediate consumption, entries into customs bonded warehouses, and entries into U.S. Foreign Trade Zones, thus generally reflecting total arrivals of merchandise. *Imports for consumption* are a combination of entries for immediate consumption, withdrawals from warehouses for consumption, and entries of merchandise into U.S. customs territory from U.S. Foreign Trade Zones, thus generally reflecting the total of the commodities entered into U.S. consumption channels.

Beginning in 1989, import statistics are based on the Harmonized Tariff Schedule of the United States, which coincides with import Standard International Trade Classification, Revision 3. This revision will affect the comparability of most import series beginning with the 1989 data.

**Area coverage**—Except as noted, the geographic area covered by the export and import trade statistics is the United States Customs area (includes the 50 states, the District of Columbia, and Puerto Rico), the U.S. Virgin Islands (effective January 1981), and U.S. Foreign Trade Zones (effective July 1982). Data for selected tables and total values for 1980 have been revised to reflect the U.S. Virgin Islands' trade with foreign countries, where possible.

**Statistical reliability**—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to Census Bureau data, see Appendix III.

Table 1286. U.S. International Transactions by Type of Transaction: 1990 to 2010

NA Not available. <sup>1</sup> Credits, +; Exports of goods and services and income receipts; unilateral current transfers to the United States; capital account transactions receipts; financial inflows—increase in foreign-owned assets (U.S. liabilities) or decrease in U.S.-owned assets (U.S. claims). Debits, –: Imports of goods and services and income payments; unilateral current transfers to foreigners; capital account transactions payments; financial outflows—decrease in foreign-owned assets (U.S. liabilities) or increase in U.S.-owned assets (U.S. claims). <sup>2</sup> See Table 2 footnotes for explanations of the various balance of payments adjustments made to convert goods on a Census-basis to goods on a balance of payments basis. The adjustments are made to improve coverage, eliminate duplication and align the goods data with national and international accounting guidelines. <sup>3</sup> Includes some goods: Mainly military equipment and supplies in lines 5 and 22 that are commingled in the source data and cannot be separately identified. Beginning with statistics for 1999, line 5 excludes equipment and supplies exported under the U.S. Foreign Military Sales program that can be separately identified, and line 22 excludes petroleum purchases abroad by U.S. military agencies that can be separately identified. <sup>4</sup> Includes transfers of goods and services under U.S. military grant programs. <sup>5</sup> Beginning in 1982, these lines are presented on a gross basis. The definition of exports is revised to exclude U.S. parents' payments to foreign affiliates and to include U.S. affiliates' receipts from foreign parents. <sup>6</sup> Beginning in 1982, the "other transfers" component includes taxes paid by U.S. private residents to foreign governments and taxes paid by private nonresidents to the U.S. Government. <sup>7</sup> Includes sales of foreign obligations to foreigners.

D Suppressed to avoid the disclosure of data of individual companies. NA Not available. <sup>1</sup> The data on total employment in the state or area that is used to calculate the shares shown in this table are equal to employment in private industries less employment of private households. For consistency with the coverage of the private-industry employment data, U.S.-affiliate employment in Puerto Rico, in "other U.S. areas," and in "foreign" was excluded from the U.S.-affiliate employment total when the percentage shares were computed. <sup>2</sup> Includes aircraft, railroad rolling stock, satellites, undersea cable, and trucks engaged in interstate transportation.

**Table 1294. U.S. Businesses Acquired or Established by Foreign Direct Investors—Investment Outlays by Industry of U.S. Business Enterprise and Country of Ultimate Beneficial Owner: 2000 to 2008**

[In millions of dollars (335,629 represents \$335,629,000,000). Foreign direct investment is the ownership or control directly or indirectly, by one foreign individual branch, partnership, association, trust, corporation, or government of 10 percent or more of the voting securities of a U.S. business enterprise or an equivalent interest in an unincorporated one. Data represent number and full cost of acquisitions of existing U.S. business enterprises, including business segments or operating units of existing U.S. business enterprises and establishments of new enterprises. Investments may be made by the foreign direct investor itself, or indirectly by an existing U.S. affiliate of the foreign direct investor. Covers investments in U.S. business enterprises with assets of over \$1 million, or ownership of 200 acres of U.S. land]

**Table 1296. U.S. Direct Investment Position Abroad on a Historical-Cost Basis by Selected Country: 2000 to 2010**

[In millions of dollars (1,316,247 represents \$1,316,247,000,000). U.S. investment abroad is the ownership or control by one U.S. person of 10 percent or more of the voting securities of an incorporated foreign business enterprise or an equivalent interest in an unincorporated foreign business enterprise. Negative position can occur when a U.S. parent company's liabilities to the foreign affiliate are greater than its equity in and loans to the foreign affiliate]

West Bank-Gaza Regional	64	171	179	128	152	474	812	687

— Represents zero. Z Less than \$500,000. <sup>1</sup> Includes other countries, not shown separately. <sup>2</sup> In 1992, some successor countries assumed portions of outstanding credits of the former Yugoslavia (assignment of the remaining portions is pending). Subsequent negative totals reflect payments to the United States on these assumed credits which were greater than the extension of new credits and grants to these countries. <sup>3</sup> Includes European Atomic Energy Community, European Coal and Steel Community, European Payments Union, European Productivity Agency, North Atlantic Treaty Organization, and Organization for European Economic Cooperation. <sup>4</sup> In recent years, significant amounts of foreign assistance has been reported on a regional, inter-regional, and worldwide basis. Country totals in this table may understate actual assistance to many countries. <sup>5</sup> United Nations Relief and Works Agency for Palestine refugees. <sup>6</sup> See footnote 5, table 1332. <sup>7</sup> Excludes transactions with Commonwealth of the Northern Mariana Islands after October 1986; includes transactions with Federated States of Micronesia, Republic of the Marshall Islands, and Republic of Palau. <sup>8</sup> Includes transfer of Panama Canal to the Republic of Panama on Dec. 1999. <sup>9</sup> Includes Andean Development Corporation, Caribbean Development Bank, Central American Bank for Economic Integration, Eastern Caribbean Central Bank, Inter-American Institute of Agricultural Science, Organizations of American States, and Pan American Health Organization. <sup>10</sup> Foreign assistance to Iraq in 1991–96 was direct humanitarian assistance to ethnic minorities of Northern Iraq after the conflict in the Persian Gulf. Foreign assistance to Iraq in 2003 thru 2009 includes Iraq Reconstruction and humanitarian assistance.

Z Less than \$50 million. <sup>1</sup> Totals shown for exports reflect the value of estimated parcel post and Special Category shipments, and adjustments for undocumented exports to Canada, which are not distributed by customs district. The value of bituminous coal exported through Norfolk, VA; Charleston, SC; and Mobile, AL is reflected in the total but not distributed by district. <sup>2</sup> Excludes exports of bituminous coal, which are included in "Total."

## Section 29

# Puerto Rico and the Island Areas

---

This section presents summary economic and social statistics for Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Northern Mariana Islands. Primary sources are the decennial censuses of population and housing, County Business Patterns, and the Puerto Rico Community Survey conducted by the U.S. Census Bureau; the annual *Vital Statistics of the United States*, issued by the National Center for Health Statistics; and the annual *Income and Product* of the Puerto Rico Planning Board.

**Jurisdiction**—The United States gained jurisdiction over these areas as follows: the islands of *Puerto Rico* and *Guám*, surrendered by Spain to the United States in December 1898, were ceded to the United States by the Treaty of Paris, ratified in 1899. Puerto Rico became a commonwealth on July 25, 1952, thereby achieving a high degree of local autonomy under its own constitution. The *U.S. Virgin Islands*, comprising 50 islands and cays, was purchased by the United States from Denmark in 1917. *American Samoa*, a group of seven islands, was acquired by the United States in accordance with a convention among the United States, Great Britain, and Germany, ratified in 1900 (Swains Island was annexed in 1925). By an agreement approved by the Security Council and the United States, the Northern Mariana Islands, previously under Japanese mandate, was administered by the United States between 1947 and 1986 under the United Nations trusteeship system. The Northern Mariana Islands became a commonwealth in 1986.

**Censuses**—Because characteristics of Puerto Rico and the Island Areas differ, the presentation of census data for them is not uniform. The 1960 Census

of Population covered all of the places listed above except the Northern Mariana Islands (their census was conducted in April 1958 by the Office of the High Commissioner), while the 1960 Census of Housing excluded American Samoa. The 1970, 1980, 1990, 2000, and 2010. Censuses of Population and Housing covered all five areas. Beginning in 1967, Congress authorized the economic censuses, to be taken at 5-year intervals, for years ending in “2” and “7.” Prior economic censuses were conducted in Puerto Rico for 1949, 1954, 1958, and 1963 and in Guam and the U.S. Virgin Islands for 1958 and 1963. In 1967, the census of construction industries was added for the first time in Puerto Rico; in 1972, the U.S. Virgin Islands and Guam were covered; and in 1982, the economic census was taken for the first time for the Northern Mariana Islands.

**Puerto Rico Community Survey**—The Puerto Rico Community Survey (PRCS) began in 2005 and was a critical element in the Census Bureau’s reengineered 2010 census plan. The American Community Survey is the equivalent of the PRCS for the United States (50 states and District of Columbia). The PRCS collects and produces population and housing information every year instead of every 10 years. About 36,000 households are surveyed each year from across every municipio in Puerto Rico.

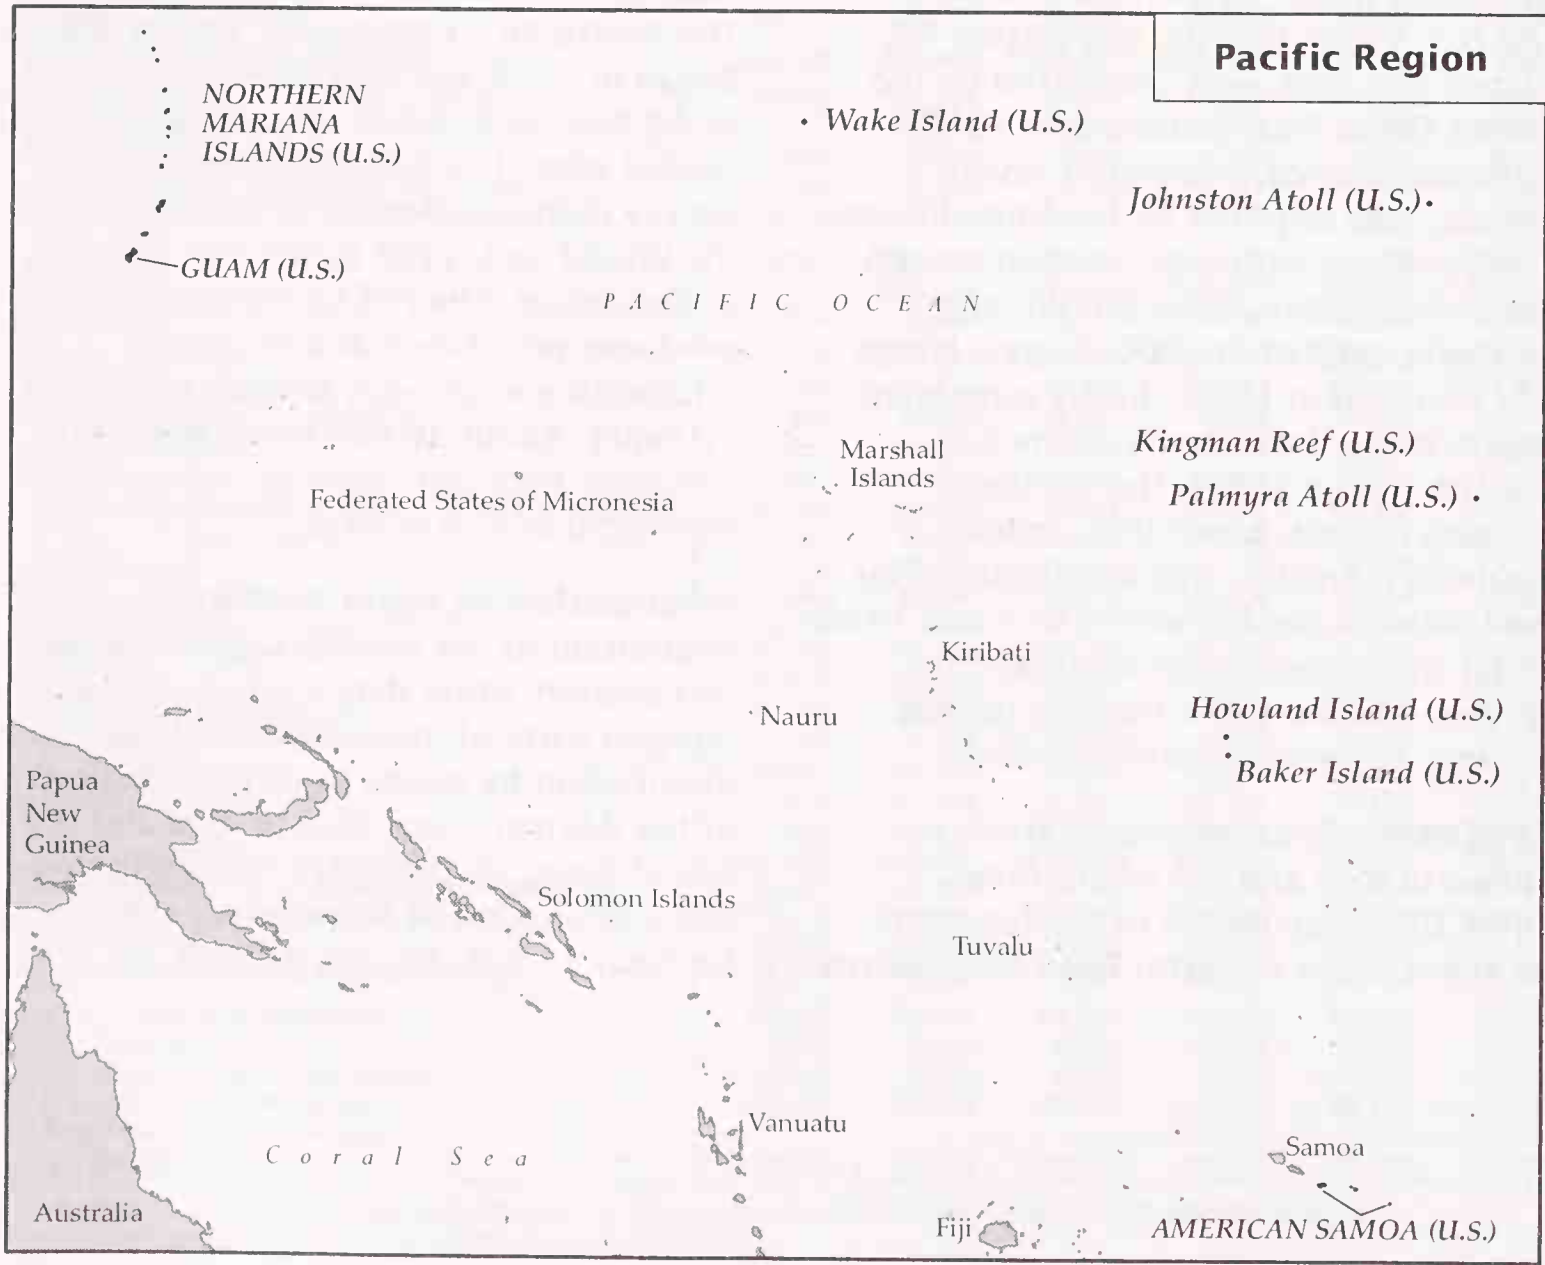

**Information in other sections**—In addition to the statistics presented in this section, other data are included as integral parts of many tables showing distribution by states in various sections of the *Abstract*. See “Puerto Rico and the Island Areas” in the Index. For definition and explanation of terms used, see Sections 1, 2, 4, 17, 20, 21, and 22.

Selected Island Areas of the United States

Caribbean Region

Pacific Region

**Table 1313. Estimated Resident Population With Projections: 1990 to 2025**

[In thousands (3,537 represents 3,537,000). Population as of July 1. Population data generally are de-facto figures for the present territory. Data for 1990 to 2000 are adjusted to the 2000 Census of Population for Puerto Rico only. See text, Section 30, for general comments regarding the data. For details of methodology, coverage, and reliability, see source]

## Section 30

# International Statistics

---

This section presents statistics for the world as a whole and for many countries on a comparative basis with the United States. Data are shown for population, births and deaths, social and industrial indicators, finances, agriculture, communication, and military affairs.

Statistics of the individual nations may be found primarily in official national publications, generally in the form of yearbooks, issued by most of the nations at various intervals in their own national languages and expressed in their own or customary units of measure. (For a listing of selected publications, see Guide to Sources.) For handier reference, especially for international comparisons, the United Nations Statistics Division compiles data as submitted by member countries and issues a number of international summary publications, generally in English and French. Among these are the *Statistical Yearbook*; the *Demographic Yearbook*; *International Trade Statistics Yearbook*; *National Accounts Statistics: Main Aggregates and Detailed Tables*; *Population and Vital Statistics Reports*, semi-annually; the *Monthly Bulletin of Statistics*; and the *Energy Statistics Yearbook*. Specialized agencies of the United Nations also issue international summary publications on agricultural, labor, health, and education statistics. Among these are the *Production Yearbook* and *Trade Yearbook* issued by the Food and Agriculture Organization, the *Yearbook of Labour Statistics* issued by the International Labour Office and *World Health Statistics* issued by the World Health Organization, and the *Statistical Yearbook* issued by the Educational, Scientific, and Cultural Organization.

The U.S. Census Bureau publishes estimates and projections of key demographic measures for countries and regions of the world in its International Data Base at <<http://www.census.gov/ipc/www/idb/>>.

The International Monetary Fund (IMF) and the Organization for Economic

Cooperation and Development (OECD) also compile data on international statistics. The IMF publishes a series of reports relating to financial data. These include *International Financial Statistics*, *Direction of Trade*, and *Balance of Payments Yearbook*, published in English, French, and Spanish. The OECD publishes a vast number of statistical publications in various fields such as economics, health, and education. Among these are *OECD in Figures*, *Main Economic Indicators*, *Economic Outlook*, *National Accounts*, *Labour Force Statistics*, *OECD Health Data*, and *Education at a Glance*.

**Statistical coverage, country names, and classifications**—Problems of space and availability of data limit the number of countries and the extent of statistical coverage shown. The list of countries included and the spelling of country names are based almost entirely on the list of independent nations, dependencies, and areas of special sovereignty provided by the U.S. Department of State.

In the last quarter-century, several important changes took place in the status of the world's nations. In 1991, the Soviet Union broke up into 15 independent countries: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan. In the South Pacific, the Marshall Islands, Micronesia, and Palau gained independence from the United States in 1991. Following the breakup of the Socialist Federal Republic of Yugoslavia in 1992, the United States recognized Bosnia and Herzegovina, Croatia, Slovenia, and Macedonia as independent countries.

The Treaty of Maastricht created the European Union (EU) in 1992 with 12 member countries. The EU is not a state intended to replace existing states, but it is more than just an international organization. Its member states have set up common institutions to which they

delegate some of their sovereignty so that decisions on specific matters of joint interest can be made democratically at a European level. This pooling of sovereignty is also called “European integration.” The EU has grown in size with successive waves of accessions in 1995, 2004, and 2007. The 27 current members of the EU are: Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom.

In 1992, the EU decided to establish an economic and monetary union (EMU), with the introduction of a single European currency managed by a European Central Bank. The single currency—the euro—became a reality on January 1, 2002, when euro notes and coins replaced national currencies in 12 of the then 15 countries of the European Union (Belgium, Germany, Greece, Spain, France, Ireland, Italy, Luxembourg, the Netherlands, Austria, Portugal, and Finland). Since then, 12 countries have become members of the EU, but Slovakia, Slovenia, Malta, Cyprus, and Estonia have been the only new members of the EU to adopt the euro as the national currency.

On January 1, 1993, Czechoslovakia was succeeded by two independent countries: the Czech Republic and Slovakia. Eritrea announced its independence from Ethiopia in April 1993 and was subsequently recognized as an independent nation by the United States. In May of 2002, Timor-Leste won independence from Indonesia.

Serbia and Montenegro, both former republics of Yugoslavia, became independent of one another on May 31, 2006. This separation is seen in the population estimates tables (Tables 1332, 1358, and 1404), but some tables may still show both countries as combined. On February 17, 2008, Kosovo declared its independence from Serbia, making it the world’s newest independent state. The Netherlands Antilles dissolved on October 10, 2010. As a result, Curaçao and Sint

Maarten became autonomous territories of the Netherlands.

The population estimates and projections used in Tables 1329–1332, 1334, and 1339 were prepared by the Census Bureau. For each country, available data on population, by age and sex, fertility, mortality, and international migration were evaluated and, where necessary, adjusted for inconsistencies and errors in the data. In most instances, comprehensive projections were made by the cohort-component method, resulting in distributions of the population by age and sex and requiring an assessment of probable future trends of fertility, mortality, and international migration.

### **Economic associations—**

The Organization for European Economic Co-operation (OEEC), a regional grouping of Western European countries established in 1948 for the purpose of harmonizing national economic policies and conditions, was succeeded on September 30, 1961, by the Organization for Economic Cooperation and Development (OECD). The member nations of the OECD are Australia, Austria, Belgium, Canada, Chile, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, Slovakia, Slovenia, South Korea, Spain, Sweden, Switzerland, Turkey, the United Kingdom, and the United States.

### **Quality and comparability of the data—**

The quality and comparability of the data presented here are affected by a number of factors:

(1) The year for which data are presented may not be the same for all subjects for a particular country or for a given subject for different countries, though the data shown are the most recent available. All such variations have been noted. The data shown are for calendar years except as otherwise specified.

(2) The bases, methods of estimating, methods of data collection, extent of coverage, precision of definition, scope of territory, and margins of error may vary for different items within a particular country, and for like items for different

countries. Footnotes and headnotes to the tables give a few of the major time periods and coverage qualifications attached to the figures; considerably more detail is presented in the source publications. Many of the measures shown are, at best, merely rough indicators of magnitude.

(3) Figures shown in this section for the United States may not always agree with figures shown in the preceding sections. Disagreements may be attributable to the use of differing original sources, a difference in the definition of geographic limits (the 50 states, conterminous United States only, or the United States including certain outlying areas and possessions), or to possible adjustments made in the United States' figures by other sources to make them more comparable with figures from other countries.

**International comparisons of national accounts data**—To compare national accounts data for different countries, it is necessary to convert each country's data into a common unit of currency, usually the U.S. dollar. The market exchange rates, which often are used in converting national currencies, do not necessarily reflect the relative purchasing power in the various countries. It is necessary that the goods and services produced in different countries be valued consistently if the differences observed are meant to reflect real differences in the volumes of goods and services produced. The use of purchasing power parities (see Tables 1347, 1348, and 1394) instead of exchange rates is intended to achieve this objective.

The method used to present the data shown in Table 1348 is to construct volume measures directly by revaluing the goods and services sold in different countries at a common set of international prices. By dividing the ratio of the gross domestic products of two countries expressed in their own national currencies by the corresponding ratio calculated at constant international prices, it is possible to derive the implied purchasing power

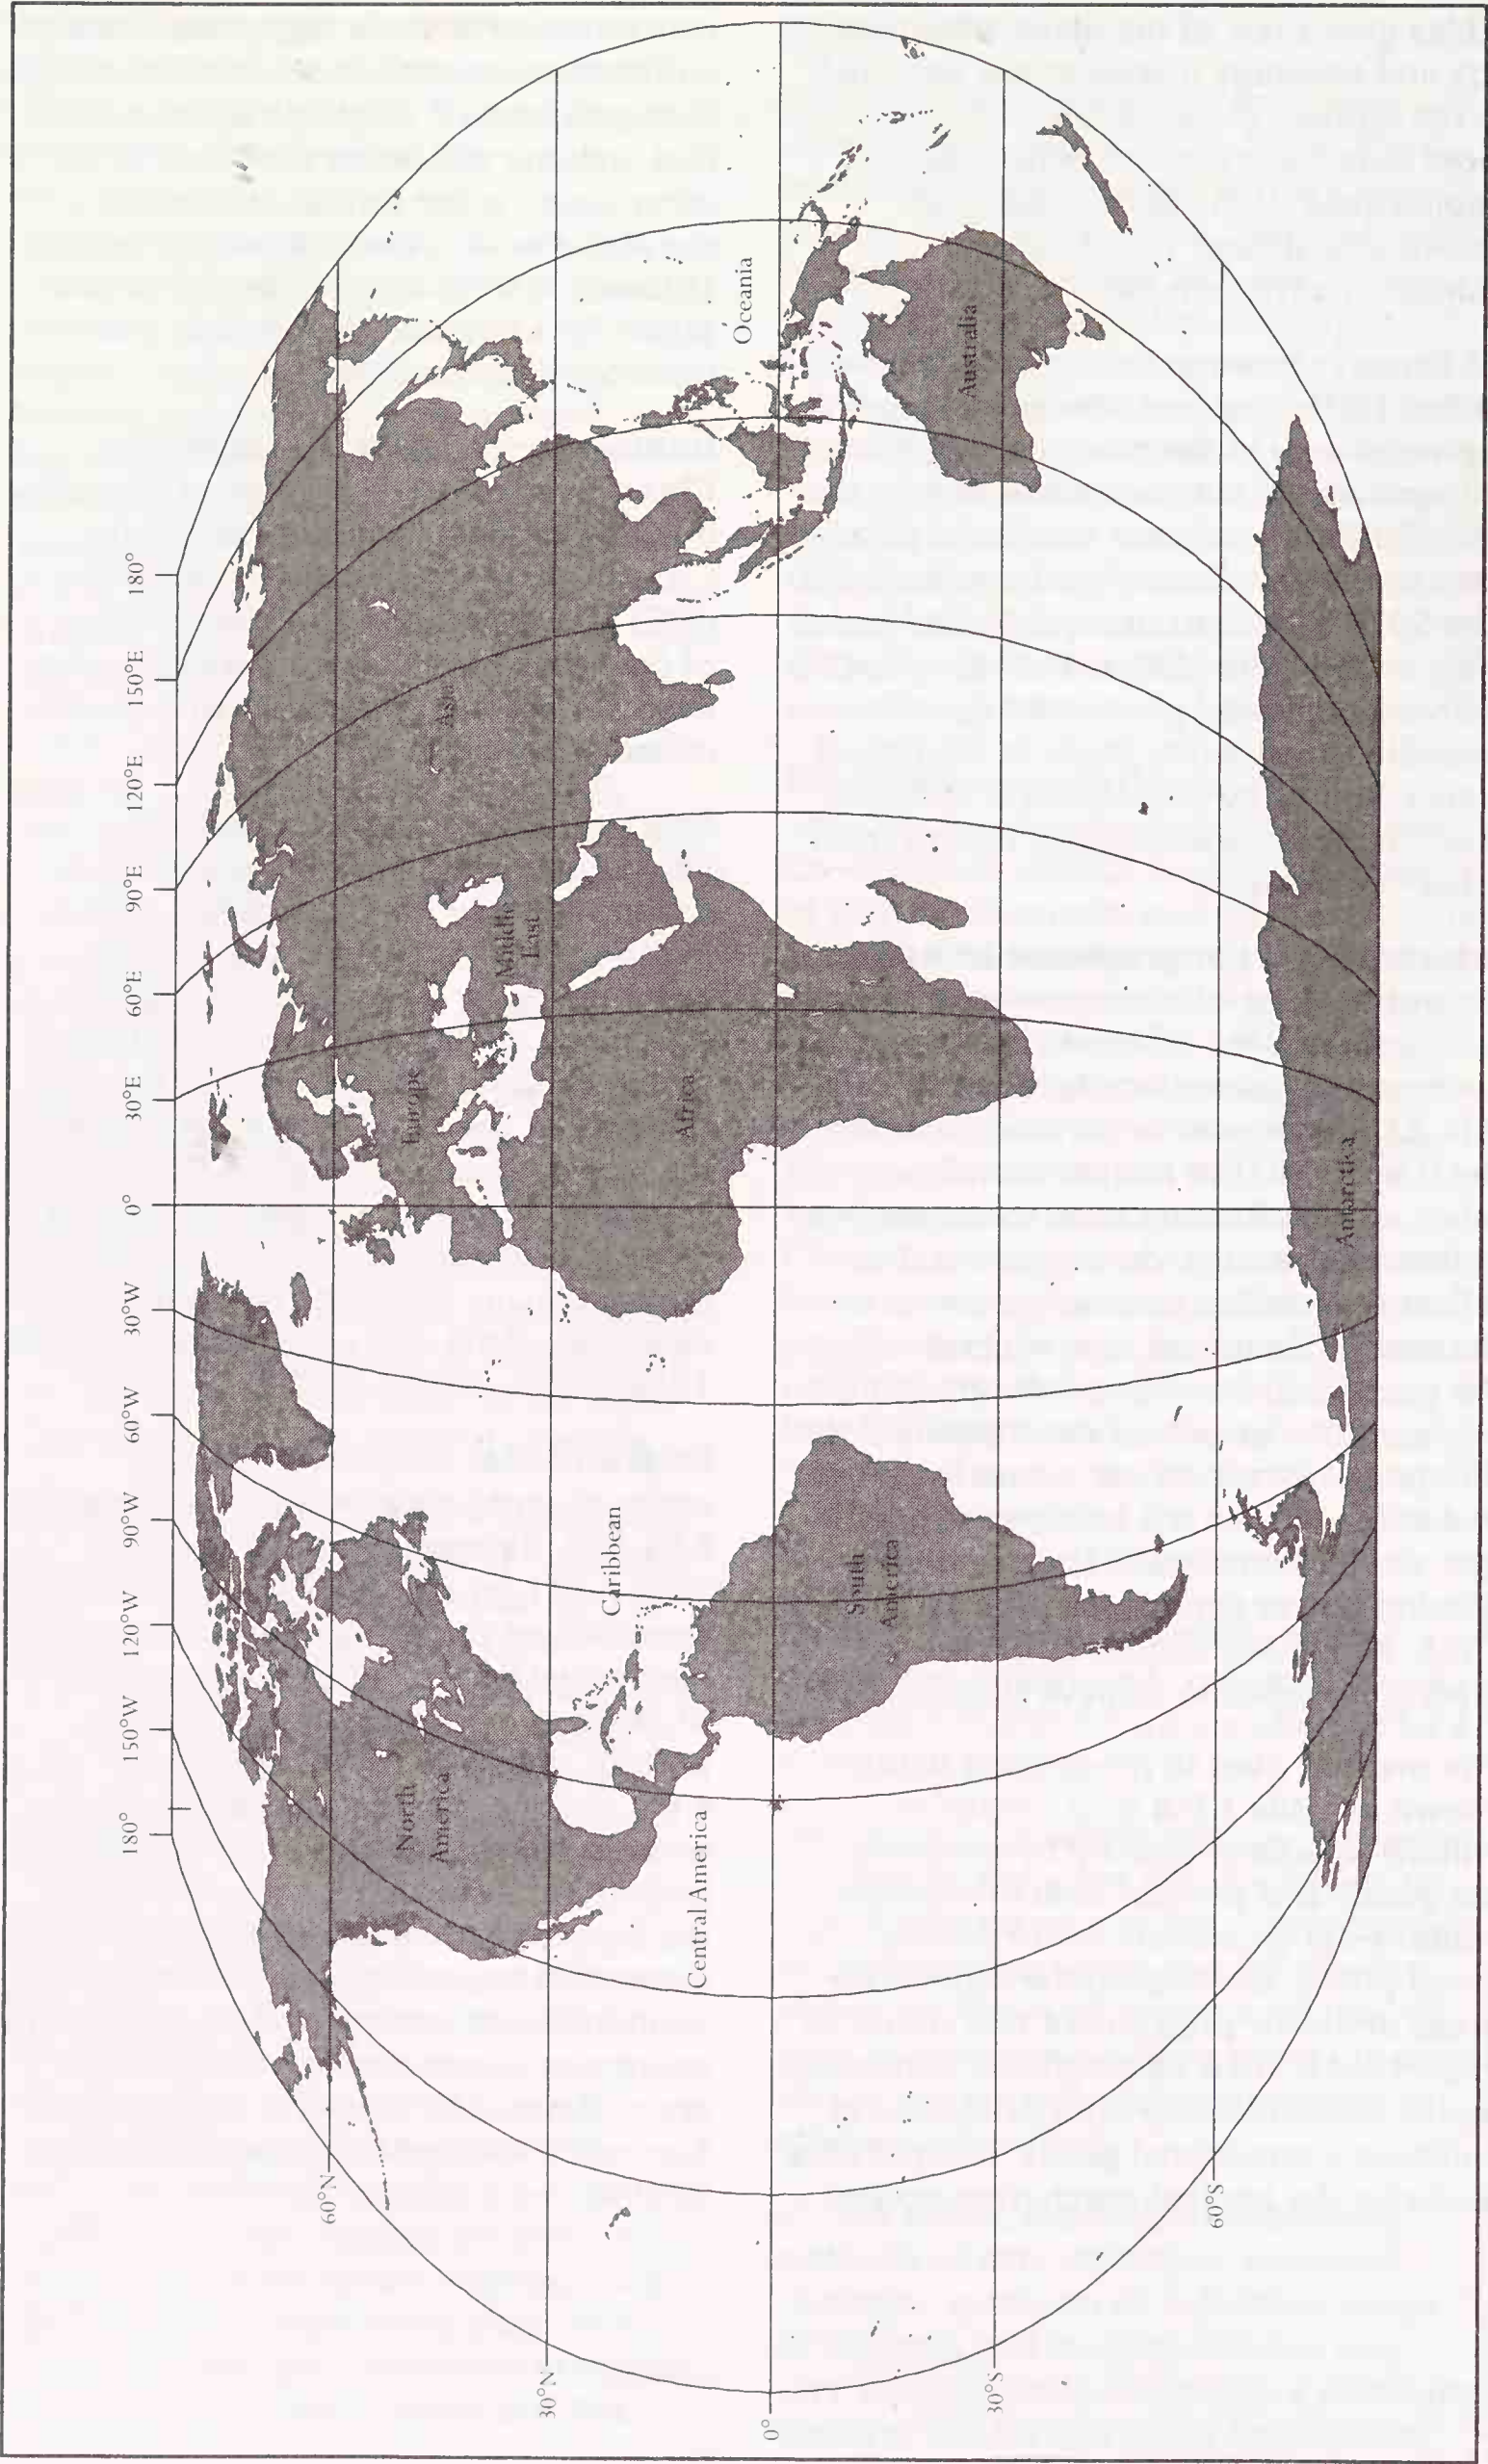

parity (PPP) between the two currencies concerned. PPPs show how many units of currency are needed in one country to buy the same amount of goods and services that one unit of currency will buy in the other country. For further information, see *National Accounts, Main Aggregates, Volume I*, issued annually by the Organisation for Economic Cooperation and Development, Paris, France.

**International Standard Industrial Classification**—The original version of the International Standard Industrial Classification of All Economic Activities (ISIC) was adopted in 1948. A number of countries have utilized the ISIC as the basis for devising their industrial classification scheme.

Substantial comparability has been attained between the industrial classifications of many other countries, including the United States and the ISIC by ensuring, as far as practicable, that the categories at detailed levels of classification in national schemes fit into only one category of the ISIC. The United Nations, the International Labour Organization, the Food and Agriculture Organization, and other international bodies use the ISIC in publishing and analyzing statistical data. Revisions of the ISIC were issued in 1958, 1968, 1989, 2002, and 2008.

**International maps**—A series of regional world maps is provided on pages 826–834. References are included in Table 1331 for easy location of individual countries on the maps. The Robinson map projection is used for this series of maps. A map projection is used to portray all or part of the round Earth on a flat surface, but this cannot be done without some distortion. For the Robinson projection, distortion is very low along the Equator and within 45 degrees of the center but is greatest near the poles. For additional information on map projections and maps, please contact the Earth Science Information Center, U.S. Geological Survey, 507 National Center, Reston, VA 22092.

X Not applicable. Z Less than 0.05 percent or less than one person per square mile. <sup>1</sup> See maps on pp. 826-834 for geographic locations. <sup>2</sup> Computed by the exponential method. For explanation of average annual percent change, see Guide to Tabular Presentation. <sup>3</sup> Source: Central Intelligence Agency, "CIA World Factbook," accessed August 2010. (Data converted from square kilometers to square miles). <sup>4</sup> With the establishment of diplomatic relations with China on January 1, 1979, the U.S. government recognized the People's Republic of China as the sole legal government of China and acknowledged the Chinese position that there is only one China and that Taiwan is part of China. <sup>5</sup> "Congo" is the official short-form name for both the Republic of Congo and the Democratic Republic of the Congo. To distinguish one from the other the U.S. Department of State adds the capital in parentheses. This practice is unofficial and provisional. <sup>6</sup> Data for 1990 are for former West Germany and East Germany combined. <sup>7</sup> The Gaza Strip and West Bank are Israeli occupied with interim status subject to Israeli/Palestinian negotiations. The final status is yet to be determined. <sup>8</sup> See footnote 4, Table 1398.

NA Not available. <sup>1</sup> Data are from population registers of foreigners except for France, Greece, Mexico, and Poland (census), Ireland and the United Kingdom (Labour Force Survey), Portugal (residence permits), Australia (inter- and post-censal estimates), and the United States (Current Population Survey). <sup>2</sup> Includes unemployed except for Belgium, Greece, Norway, Luxembourg, Netherlands, and the United Kingdom. Germany, Luxembourg, and Netherlands include cross-border workers. Belgium and Italy include the self-employed. Data for Austria, Germany, and Luxembourg are from social security registers, and for Denmark, from the register of population. Data for Italy, Spain, and Switzerland are from residence or work permits. Figures for Japan and Netherlands are estimates. Data for other countries are from labor force surveys. <sup>3</sup> Or latest period available. <sup>4</sup> Children under 18 who are registered on their parents' permit are not counted. <sup>5</sup> Data are based on registered foreign nationals which include foreigners staying in Japan for more than 90 days. <sup>6</sup> Number of foreigners with a residence permit. Permits of short duration (less than 6 months) as well as students are excluded. <sup>7</sup> Number of foreigners with an annual residence permit or with a settlement permit (permanent permit). Seasonal and frontier workers are excluded. <sup>8</sup> Estimated from the annual labour force survey. Fluctuations from year to year may be due to sampling error.

Table 1337. Single-Parent Households: 1980 to 2009

[In thousands (6,061 represents 6,061,000), except for percent. For the United Kingdom in 1981, children are defined as those under 15 and those who are 15, 16, or 17 and attended school full-time; for later years, children are defined as those under 16 and those who are 16 or 17 and attend school full-time. For Ireland, children are defined as those under 15. For Denmark for 2009 and France, children are defined as those under 25. For Canada for 2001 onward and for Germany for 1995 onward, children are of all ages. For Germany in 1991 and all other countries, children are defined as those under 18 living at home, or away at school. Data are generally for the entire year, but in some instances they are only for a particular month within the year]

NA Not available. <sup>1</sup> May include unmarried cohabitating couples. Such couples are explicitly included under married couples in Canada, Denmark, Ireland, France, the Netherlands, Sweden, and the United Kingdom. In Germany, cohabitants are grouped with married couples beginning in 2000. In other countries, some unmarried cohabitants are included as married couples, while some are classified under “other households.” <sup>2</sup> Children are defined as unmarried children living at home according to the following age limits: under 18 years old in the United States, Canada (1981–96), Japan, Denmark (1980–2007), Sweden, and the United Kingdom, except that the United Kingdom includes 15-, 16-, and 17-year-olds in 1981 and 16- and 17-year-olds thereafter only if they are attending school full-time; under 25 years old in Denmark (2009 only) and France; and children of all ages in Canada (2001 onward), Germany, Ireland, and the Netherlands. <sup>3</sup> Includes both family and nonfamily households not elsewhere classified. These households comprise, for example, siblings residing together, other households composed of relatives, and households made up of roommates. Some unmarried cohabitating couples may also be included in the “other” group. See footnote 1. <sup>4</sup> Break in series. <sup>5</sup> From family-based statistics. However, one person living alone constitutes a family in Denmark. In this respect, the Danish data are closer to household statistics. <sup>6</sup> Great Britain only (excludes Northern Ireland).

Table 1342. Percentage of the Adult Population Considered to Be Obese:  
2008

[Obesity rates are defined as the percentage of the population with a Body Mass Index (BMI) over 30 kg/m<sup>2</sup>. The BMI is a single number that evaluates an individual's weight status in relation to height (weight/height<sup>2</sup>, with weight in kilograms and height in meters). For the United States, Australia, Canada, Ireland, Japan, South Korea, Luxembourg, Mexico, New Zealand, and the United Kingdom, figures are based on health examinations, rather than self-reported information. Obesity estimates derived from health examinations are generally higher and more reliable than those coming from self-reports because they preclude any misreporting of people's height and weight. However, health examinations are only conducted regularly in a few countries. For more information on methods by country, see <<http://www.irdes.fr/EspaceAnglais/home.html>>]

Country	2008	Country	2008	Country	2008

**Table 1349. Real Gross Domestic Product (GDP) Per Capita and Per Employed Persons by Country: 1990 to 2009**

[U.S. figures based on the System of National Income and Product Accounts (NIPA) from the Bureau of Economic Analysis. All other countries, based on the 1993 United Nations System of National Accounts. Per capita data based on total resident population. Real GDP is a macroeconomic measure of the size of an economy adjusted for price changes and inflation. Employment data include people serving in the armed forces for some countries. Real dollars are calculated based on 2009 Purchasing Power Parities (PPPs). PPPs are currency conversion rates used to convert GDPs expressed in different currencies to a common value (U.S. dollars in this case). A PPP for a given country is the number of national currency units needed to buy the specific basket of goods and services that one dollar will buy in the United States. See text, this section]

**Table 1351. Sectoral Contributions to Gross Value Added: 2000 and 2010**

[In percent. According to the 1993 System of National Accounts (SNA) and the International Standard Industrial Classification (ISIC), Revision 3 (1990). Value added is estimated at basic prices and includes financial intermediation services indirectly measured (FISIM). Value added represents an industry's contribution to national GDP and is calculated as the difference between production and intermediate inputs. Value added comprises labor costs, consumption of fixed capital, indirect taxes less subsidies, and net operating surplus and mixed income]

– Represents or rounds to zero. <sup>1</sup> Data prior to 1991 are for the former West Germany. <sup>2</sup> In Canada, France, Sweden, and the United Kingdom, compensation adjusted for employment taxes and government subsidies to estimate the actual cost to employers. <sup>3</sup> Index of hourly compensation divided by the index of consumer prices to adjust for changes in purchasing power. <sup>4</sup> Indexes in national currency adjusted for changes in prevailing exchange rates.

Source: U.S. Bureau of Labor Statistics, *International Comparisons of Manufacturing Productivity and Unit Labor Cost Trends 2009, Supplementary Tables 1950–2009*, December 2010. See also <<http://www.bls.gov/ilc>>.

**Table 1354. Indexes of Hourly Compensation Costs for All Employees in Manufacturing by Country: 2000 to 2009**

[United States = 100. Compensation costs include pay for time worked, other direct pay (including holiday and vacation pay, bonuses, other direct payments, and the cost of pay in kind), employer expenditures for legally required insurance programs and contractual and private benefit plans, and for some countries, other labor taxes. Data adjusted for exchange rates. Area averages are trade-weighted to account for difference in countries' relative importance to U.S. trade in manufactured goods. The trade weights used to compute the average compensation cost measures for selected economic groups are based on the relative dollar value of U.S. trade in manufactured commodities (exports plus imports) with each country or area in 2009; see source for detail]

**Table 1355. Annual Percent Change in Labor Productivity and Hours Worked by Country: 1995 to 2009**

[Change for period shown. For Advanced, Other Advanced, and Eastern European countries, labor productivity growth refers to the growth in gross domestic product per hour worked. Data are derived from The Conference Board Total Economy Database, in association with the Groningen Growth and Development Centre at the University of Groningen, Netherlands. Growth for regional aggregates is based on the weighted sum of country labor productivity growth, with the weight calculated as the two-period average of country share in PPP adjusted nominal GDP, plus a reallocation term. Gross domestic product for each country is measured in constant 2010 U.S. dollars, using GDP deflator changes. Minus sign (–) indicates decrease]

**Table 1357. Comparative Price Levels—Selected OECD Countries: 2011**

[Purchasing power parities (PPPs) are the rates of currency conversion that eliminate the differences in price levels between countries. Comparative price levels are defined as the ratios of PPPs to exchange rates. The PPPs are given in national currency units per U.S. dollar. The table is to be read vertically. Each column shows the number of specified monetary units needed in each of the countries listed to buy the same representative basket of consumer goods and services. In each case the representative basket costs a hundred units in the country whose currency is specified. Example of data: An item that costs \$1.00 in the United States would cost \$1.46 (U.S. dollars) in Japan]

Country	United States (U.S. dollar)	Canada (Canadian dollar)	Mexico (Mexican peso)	Japan (Yen)	France (Euro)	Germany (Euro)	Italy (Euro)	United Kingdom (Pound)

**Table 1358. Indexes of Living Costs Abroad: 2011**

[As of January 2011. Washington, DC=100. Indexes compare the costs in dollars of representative goods and services (excluding housing and education) purchased at the foreign location and the cost of comparable goods and services in the Washington, DC area. The indexes are computed for private American employees and exclude special advantages that may be available only to U.S. Government employees. The indexes are place-to-place comparisons at specific times and currency exchange rates. They cannot be used for measuring cost changes over time at a foreign location. Since the indexes reflect only the expenditure pattern and living costs of American families, they should not be used to compare living costs of Americans in the United States with the living costs of foreign nationals living in their own country]

<sup>1</sup> Also called the "local index," the living cost index measures living costs for private American citizens. The local index is a comparison of prices at the foreign post and in Washington, DC, with the price ratios weighted by the expenditure pattern of American employees living at the foreign post. It is, thereby, a measure of the cost of living for Americans at the foreign post compared with the cost of living in Washington, DC. This is the index most appropriate for use by business firms and other private organizations to establish cost-of-living allowances for their American employees stationed abroad. <sup>2</sup> See footnote 4, Table 1332.

<sup>3</sup> There are no U.S. Government employees in Taiwan. The figures listed in this column represent a living cost comparison for American employees of the American Institute in Taiwan, who have some duty-free and other special benefits that may not be available to other Americans in Taiwan.

Table 1360. Gross Public Debt, Expenditures, and Receipts by Country: 1990 to 2011

[Percent of nominal gross domestic product. Gross debt includes one-off revenues from the sale of the mobile telephone licenses. Expenditures and receipts refer to the general government sector, which is a consolidation of accounts for the central, state, and local governments plus social security. Expenditures, or total outlays, are defined as current outlays plus capital outlays. Receipts cover current receipts, but exclude capital receipts. Nontax receipts consist of property income (including dividends and other transfers from public enterprises), fees, charges, sales, fines, capital transfers received by the general government, etc. Minus sign (–) indicates deficit]

Table 1363. Household Net Saving Rates by Country: 1995 to 2008

[As a percentage of household disposable income. Household savings are estimated by subtracting household consumption expenditure from household disposable income, plus the change in net equity of households in pension funds. Households include households plus nonprofit institutions serving households. Net saving rates are measured after deducting consumption of fixed capital (depreciation), with respect to assets used in enterprises operated by households, as well as owner-occupied dwellings. The household saving rate is calculated as the ratio of household savings to household disposable income (plus the change in net equity of households in pension funds). Minus sign (–) indicates an excess of expenditures over income]

**Table 1371. Educational Performance: 2008 and 2009**

[Tertiary-type A includes education leading to a BA, Master's, or equivalent degree, and advanced research programs. Performance figures were gathered from the Program for International Student Assessment (PISA), an internationally standardized assessment jointly developed by participating countries, which takes place in 3-year cycles. To implement PISA, each of the participating countries selects a nationally representative sample of 15-year-olds, regardless of grade level. Tests are typically administered to between 4,500 and 10,000 students in each country]

Country	Student performance on the combined reading, scientific, and mathematical literacy scales, 2009			Educational attainment of adult population and current graduation rates, 2008 (percent)	
	Mean score on the combined reading literacy scale <sup>1</sup>	Mean score on the mathematical literacy scale <sup>2</sup>	Mean score on the scientific literacy scale <sup>3</sup>	Upper secondary or higher attainment (25 to 64 years old) <sup>4</sup>	Tertiary-type A attainment (25 to 64 years old) <sup>5</sup>

<sup>1</sup> A fixed telephone line (previously called main telephone line in operation) is an active line (those that have registered an activity in the past three months) connecting the subscriber's terminal equipment to the public switched telephone network (PSTN) and which has a dedicated port in the telephone exchange equipment. This term is synonymous with the terms main station or Direct Exchange Line (DEL) that are commonly used in telecommunication documents. It may not be the same as an access line or a subscriber. This should include the active number of analog fixed telephone lines, ISDN channels, fixed wireless (WLL), public payphones and VoIP subscriptions. Fixed telephone lines per 100 inhabitants is calculated by dividing the number of fixed telephone lines by the population and multiplying by 100. <sup>2</sup> See footnote 4, Table 1332.

Table 1400. International Tourism Arrivals, Expenditures, and Receipts—Leading Countries: 2000 to 2009

[Arrivals in thousands of nonresident tourists at national borders, except as noted (77,190 represents 77,190,000); expenditures and receipts in millions of dollars. Receipts are dollars spent by foreign tourists on travel inside the country shown. Expenditures are dollars visitors (same-day visitors and tourists) from a given country of origin spend on travel outside their country of residence. Excludes international transport receipts]

NA Not available. <sup>1</sup> See footnote 4, Table 1332. <sup>2</sup> See footnote 5, Table 1332. <sup>3</sup> The debt of the former Soviet Union is included in Russia's data after 1990 on the assumption that 100 percent of all outstanding external debt as of December 1991 has become a liability of Russia. Beginning in 2000, the data for Russia has also been revised to include obligations to members of the former Council for Mutual Economic Assistance and other countries in the form of trade-related credits amounting to \$15.4 billion as of the end of 1996. <sup>4</sup> In June 2006, Serbia and Montenegro became separate countries (formerly Yugoslavia). Data for 2000 are for Serbia and Montenegro. Starting 2006, data excludes Montenegro. External debt obligations—excluding IBRD, IMF, and short-term—of Bosnia and Herzegovina before 2000 are included under Serbia and Montenegro. Data from 2000 onwards are estimates and also reflect borrowing by the former Yugoslavia that are not yet allocated to the successor republics.

Appendix I

Guide to Sources of Statistics, State Statistical Abstracts, and Foreign Statistical Abstracts

Alphabetically arranged, this guide contains references to important primary sources of statistical information for the United States and other countries. Secondary sources have been included if the information contained in them is presented in a particularly convenient form or if primary sources are not readily available. Nonrecurrent publications presenting compilations or estimates for years later than 2000, or types of data not available in regular series, are also included. Data are also available in press releases.

Valuable information may also be found in state reports, foreign statistical abstracts, which are included at the end of this appendix, and in reports for particular commodities, industries, or similar segments of our economic and social structures, many of which are not included here.

Publications listed under each subject are divided into two main groups: “U.S. Government” and “Nongovernment.” The location of the publisher of each report is given except for federal agencies located in Washington, DC. Most federal publications may be purchased from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC, tel. 202-512-1800, (Web site<<http://bookstore.gpo.gov>>). In some cases, federal publications may be obtained from the issuing agency.

# Guide to State Statistical Abstracts

This bibliography includes the most recent statistical abstracts for states published since 2000, plus those that will be issued in late 2011. For some states, a near equivalent has been listed in substitution for, or in addition to, a statistical abstract. All sources contain statistical tables on a variety of subjects for the state as a whole, its component parts, or both. Internet sites also contain statistical data.

## Alabama

University of Alabama, Center for Business and Economic Research, Box 870221, Tuscaloosa, AL 35487-0221. 205-348-6191. Fax: 205-348-2951. Internet site <<http://cber.cba.ua.edu/>>. *Alabama Economic Outlook, 2011*. Revised annually.

## Alaska

Department of Commerce, Community and Economic Development, 550 West 7<sup>th</sup> Avenue, Suite 1770, Anchorage, AK 99501. 907-269-8100. Fax 907-269-8125. Internet site <[http://www.dced.state.ak.us/dca/misc\\_resources.htm](http://www.dced.state.ak.us/dca/misc_resources.htm)>. *The Alaska Economic Performance Report, 2006*. Online.

## Arizona

University of Arizona, Economic and Business Research Center, Eller College of Management, 1130 East Helen Street, McClelland Hall, Rm. 103, P.O. Box 210108, Tucson, AZ 85721-0108. 520-621-2155. Fax: 520-621-2150. Internet site <<http://www.ebr.eller.arizona.edu/>>. *Arizona Statistical Abstract, 2003*. *Arizona's Economy*. Quarterly Online, 2011. Online. *Arizona Economic Indicators Databook, 2009*. Semiannual. Online.

## Arkansas

University of Arkansas at Little Rock, Institute for Economic Advancement, Economic Research, 2801 South University Avenue, Little Rock, AR 72204-1099. 501-569-8519. Fax: 501-569-8538. Internet site <<http://www.iea.ualr.edu>>. *Arkansas State and County Economic Data, 2010*. *Arkansas Personal Income Handbook, 2010*. *Arkansas Statistical Abstract, 2008*. Revised biennially.

## California

Department of Finance, 915 L Street, Sacramento, CA 95814. 916-445-3878. Internet site <<http://www.dof.ca.gov/>>. *California Statistical Abstract, 2009*. Annual. Online only.

## Colorado

University of Colorado at Boulder, Government Publications Library, University Libraries, 184 UCB, 1720 Pleasant Street, Boulder, CO 80309-0184. 303-492-8705. Internet site <<http://ucblibraries.colorado.edu/>>.

*Colorado by the Numbers*. Online only.

Colorado Office of Economic Development and International Trade, 1625 Broadway, Suite 2700, Denver, CO 80202. 303-892-3840. Fax: 303-892-3848. Internet site <<http://www.colorado.gov/cs/Satellite/OEDIT/1162927366334>>.

*Colorado Data Book, 2010-11*. Online only.

## Connecticut

Connecticut Department of Economic and Community Development, 505 Hudson Street, Hartford, CT 06106-7106. 860-270-8000. Internet site <<http://www.ct.gov/ecd/site/default.asp>>.

*Connecticut Town Profiles, 2011*.

## Delaware

Delaware Economic Development Office, 99 Kings Highway, Dover, DE 19901-7305. 302-739-4271. Fax: 302-739-5749. Internet site <<http://dedo.delaware.gov>>.

*Delaware Statistical Overview, 2008*. Online only.

*Delaware Data Book, 2011*.

## District of Columbia

Business Resource Center, John A. Wilson Building, 1350 Pennsylvania Avenue, NW, Washington, DC 20004. 202-727-1000. Internet site. <<http://brc.dc.gov/resources/facts.asp>>.

*Market Facts and Statistics*. Online only.

## Florida

University of Florida, Bureau of Economic and Business Research, P.O. Box 117145, 221 Matherly Hall, Gainesville, FL 32611-7145. 352-392-0171, ext. 219. Fax: 352-392-4739. Internet site <<http://www.bebr.ufl.edu>>.

*Florida Statistical Abstract, 2010*. Annual. Also available on CD-ROM.

*Florida County Perspective, 2010*. One profile for each county. Annual. Also available on CD-ROM.

*Florida County Rankings, 2010*. Annual. Also available on CD-ROM.

## Georgia

University of Georgia, Terry College of Business, Selig Center for Economic Growth, Athens, GA 30602-6254. 706-542-8100. Fax: 706-542-3835. Internet site <<http://www.selig.uga.edu/>>.

*Georgia Statistical Abstract, 2008-09.*

University of Georgia, Center for Agribusiness and Economic Development, 301 Lumpkin House, Athens, GA 30602-7509. 706-542-2434. Fax: 706-542-0770. Internet site <<http://www.georgiastats.uga.edu/>>.

*The Georgia County Guide, 2010.* Annual.

## Hawaii

Hawaii State Department of Business, Economic Development & Tourism, Research and Economic Analysis Division, Statistics and Data Support Branch, P.O. Box 2359, Honolulu, HI 96804. 808-586-2423. Fax: 808-587-2790. Internet site <<http://www.hawaii.gov/dbedt/>>.

*The State of Hawaii Data Book 2009.* Annual. Periodically updated.

## Idaho

State of Idaho Department of Labor, 317 West Main St., Boise, ID 83735. 208-332-3570. Fax: 208-334-6430. Internet site <<http://labor.idaho.gov/dnn/default.aspx?alias=labor.idaho.gov/dnn/idl/>>.

*County Profiles Idaho.* Online.

*Idaho Community Profiles.* Online.

## Metropolitan and Micropolitan Statistical Areas: Concepts, Components, and Population

The United States Office of Management and Budget (OMB) defines metropolitan and micropolitan statistical areas according to published standards that are applied to U.S. Census Bureau data. The general concept of a metropolitan or micropolitan statistical area is that of a core area containing a substantial population nucleus, together with adjacent communities having a high degree of economic and social integration with that core. Currently defined metropolitan and micropolitan statistical areas are based on application of 2000 standards (which appeared in the Federal Register on December 27, 2000) to 2000 decennial census data. Current metropolitan and micropolitan statistical area definitions were announced by OMB effective June 6, 2003, and subsequently updated as of December 2003, November 2004, December 2005, December 2006, November 2007, November 2008, and December 2009.

Standard definitions of metropolitan areas were first issued in 1949 by the then Bureau of the Budget (predecessor of OMB), under the designation “standard metropolitan area” (SMA). The term was changed to “standard metropolitan statistical area” (SMSA) in 1959 and to “metropolitan statistical area” (MSA) in 1983. The term “metropolitan area” (MA) was adopted in 1990 and referred collectively to metropolitan statistical areas (MSAs), consolidated metropolitan statistical areas (CMSAs), and primary metropolitan statistical areas (PMSAs). The term “core-based statistical area” (CBSA) became effective in 2000 and refers collectively to metropolitan and micropolitan statistical areas.

OMB has been responsible for the official metropolitan areas since they were first defined, except for the period 1977 to 1981, when they were the responsibility of the Office of Federal Statistical Policy and Standards, U.S. Department of Commerce. The standards for defining metropolitan areas were modified in 1958, 1971, 1975, 1980, 1990, and 2000.

### Defining Metropolitan and Micropolitan Statistical Areas—

The 2000 standards provide that each CBSA must contain at least one urban area of 10,000 or more population. Each metropolitan statistical area must have at least one urbanized area of 50,000 or more inhabitants. Each micropolitan statistical area must have at least one urban cluster of at least 10,000 but less than 50,000 population.

Under the standards, the county (or counties) in which at least 50 percent of the population resides within urban areas of 10,000 or more population, or that contain at least 5,000 people residing within a single urban area of 10,000 or more population, is identified as a “central county” (counties). Additional “outlying counties” are included in the CBSA if they meet specified requirements of commuting to or from the central counties. Counties or equivalent entities form the geographic “building blocks” for metropolitan and micropolitan statistical areas throughout the United States and Puerto Rico.

If specified criteria are met, a metropolitan statistical area containing a single core with a population of 2.5 million or more may be subdivided to form smaller groupings of counties referred to as “metropolitan divisions.”

As of December 2009, there are 366 metropolitan statistical areas and 576 micropolitan statistical areas in the United States. In addition, there are eight metropolitan statistical areas and five micropolitan statistical areas in Puerto Rico.

### Principal Cities and Metropolitan and Micropolitan Statistical Area Titles—

The largest city in each metropolitan or micropolitan statistical area is designated a “principal city.” Additional cities qualify if specified requirements are met concerning population size and employment. The title of each metropolitan or micropolitan statistical area consists of the names of

up to three of its principal cities and the name of each state into which the metropolitan or micropolitan statistical area extends. Titles of metropolitan divisions also typically are based on principal city names, but in certain cases consist of county names.

### **Defining New England City and Town Areas**

—In view of the importance of cities and towns in New England, the 2000 standards also provide for a set of geographic areas that are defined using cities and towns in the six New England states. The New England city and town areas (NECTAs) are defined using the same criteria as metropolitan and micropolitan statistical areas and are identified as either metropolitan or micropolitan, based, respectively, on the presence of either an urbanized area of 50,000 or more population or an urban cluster of at least 10,000 but less than 50,000 population. If the specified criteria are met, a NECTA containing a single core with a population of at least 2.5 million may be subdivided to form smaller groupings of cities and towns referred to as New England city and town area divisions.

### **Changes in Definitions Over Time**

Changes in the definitions of these statistical areas since the 1950 census have consisted chiefly of (1) the recognition of new areas as they reached the minimum required city or urbanized area population and (2) the addition of counties (or cities and towns in New England) to existing areas as new decennial census data showed them to qualify.

In some instances, formerly separate areas have been merged, components of an area have been transferred from one area to another, or components have been dropped from an area. The large majority of changes have taken place on the basis of decennial census data. However, Census Bureau data serve as the basis for intercensal updates in specified circumstances.

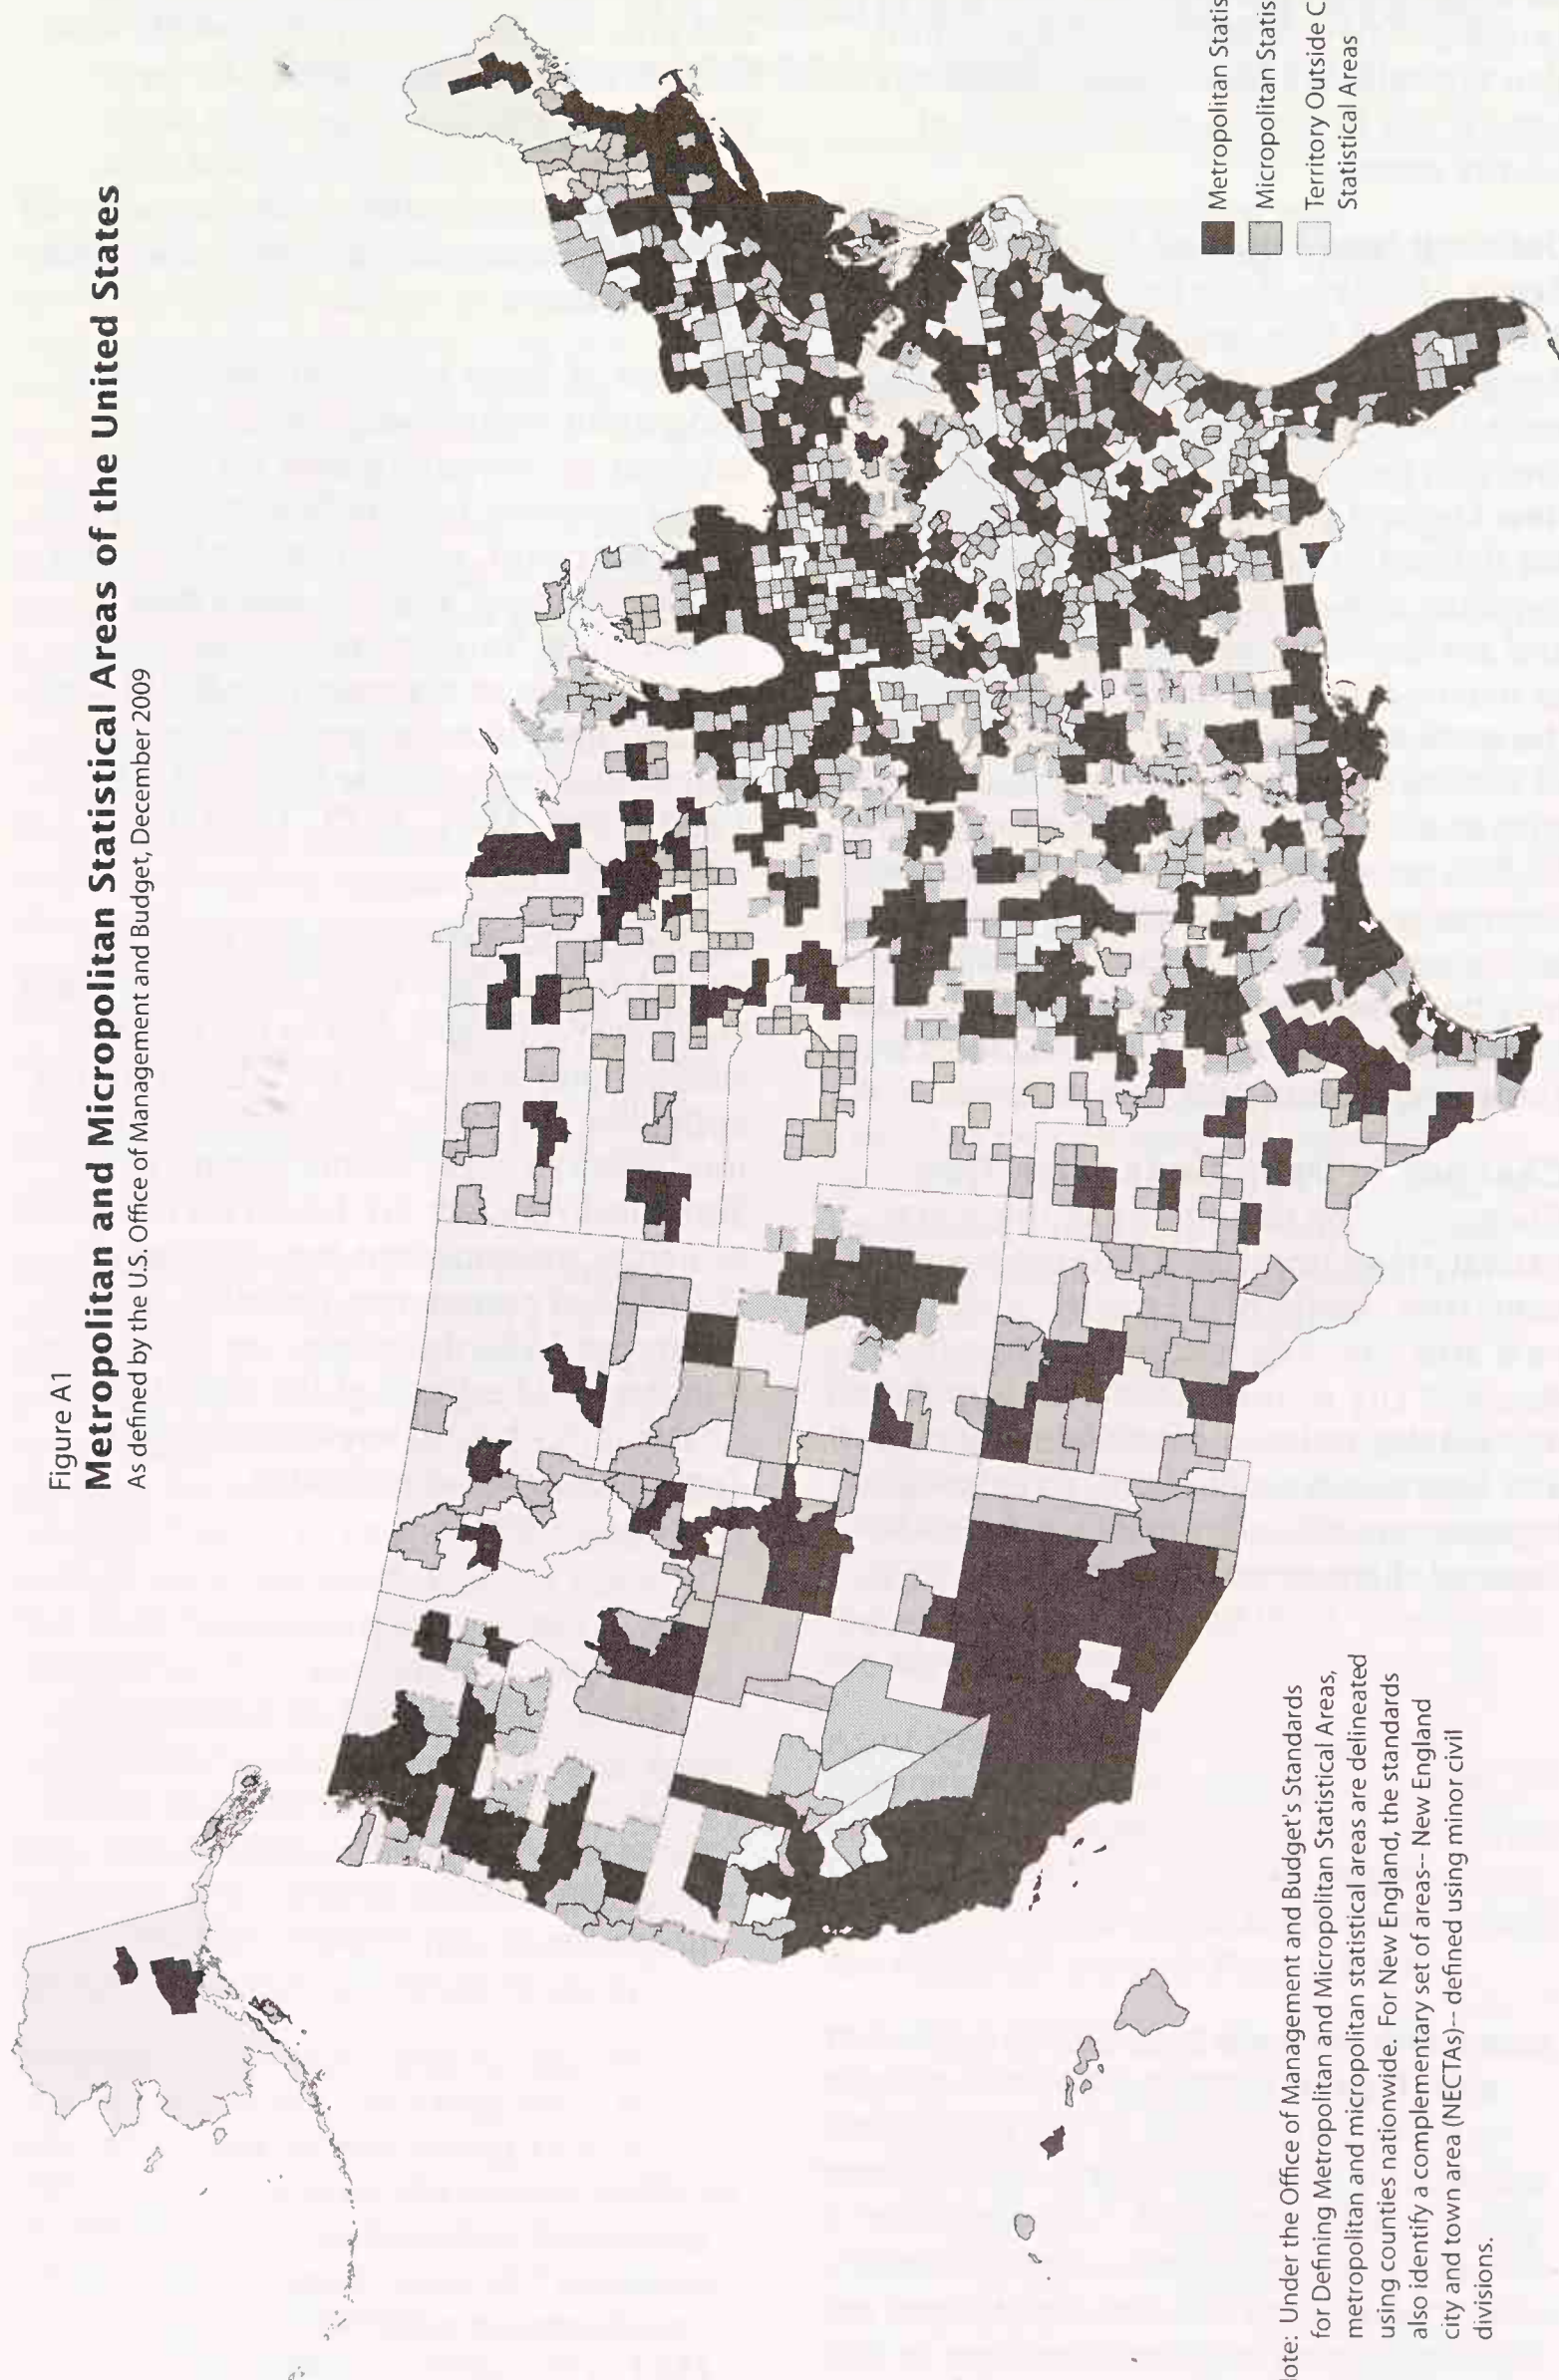

Because of these historical changes in geographic definitions, users must be cautious in comparing data for these statistical areas from different dates. For some purposes, comparisons of data for areas as defined at given dates may be appropriate; for other purposes, it may be preferable to maintain consistent area definitions. Historical metropolitan area definitions are available for 1999, 1993, 1990, 1983, 1981, 1973, 1970, 1963, 1960, and 1950.

Excluding Tables 20 through 24 in the Population section; Table 595 in the Labor Force section; Table 683 in the Income section, and the tables that follow in this appendix, the tables presenting data for metropolitan areas in this edition of the Statistical Abstract are based on the 1999 or earlier metropolitan area definitions. For a list of component counties according to the 1999 definition, see Appendix II in the 2002 edition of the Statistical Abstract or <<http://www.census.gov/population/www/estimates/pastmetro.html>>.

Figure A1

# Metropolitan and Micropolitan Statistical Areas of the United States

As defined by the U.S. Office of Management and Budget, December 2009

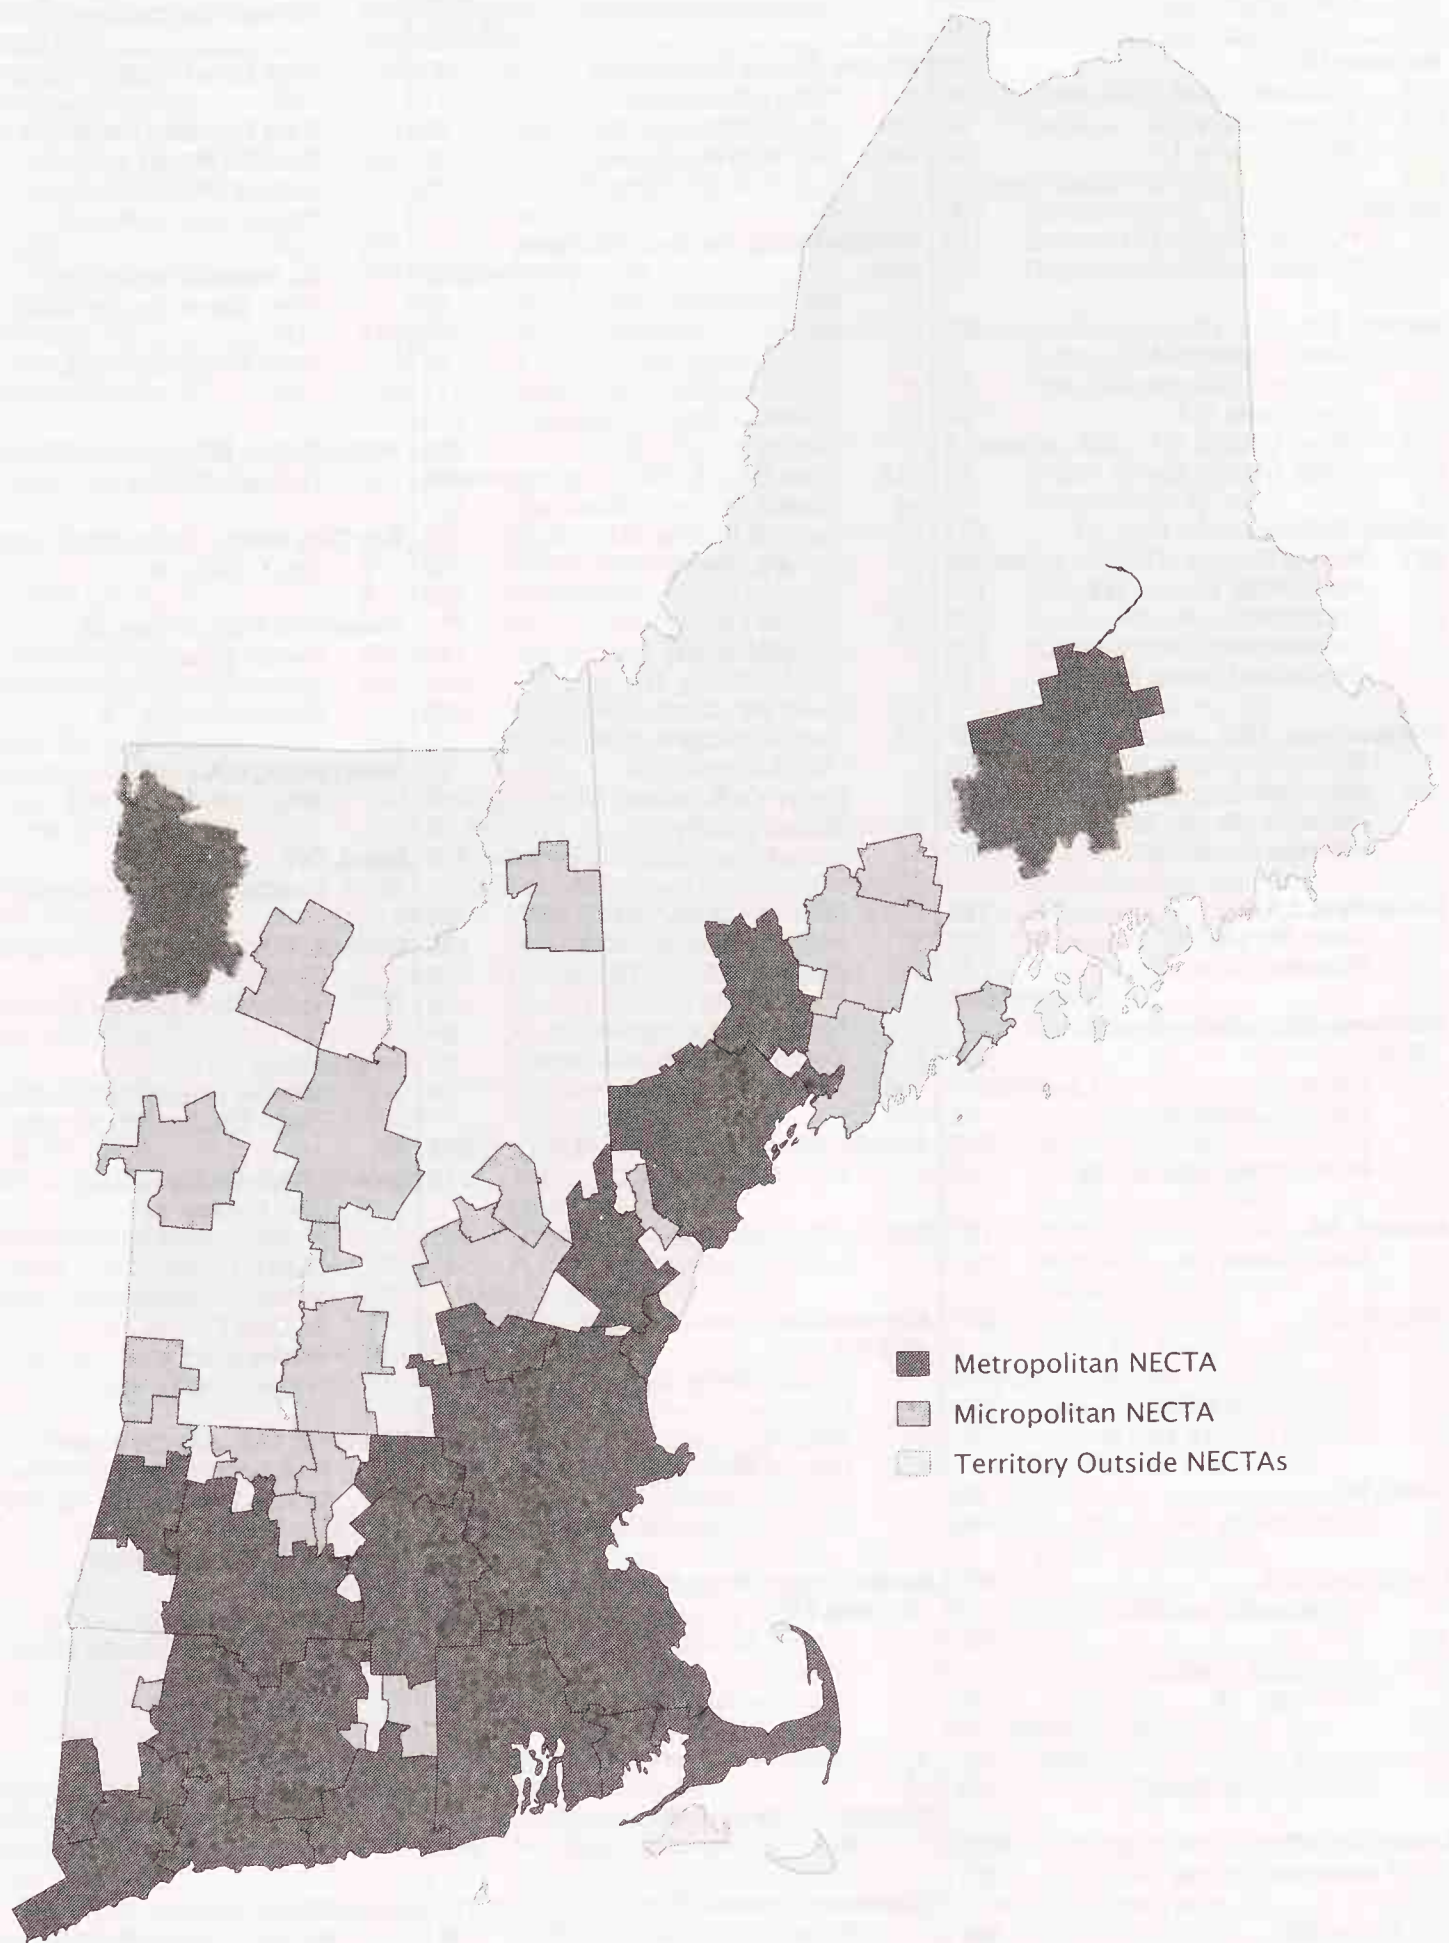

Note: Under the Office of Management and Budget's Standards for Defining Metropolitan and Micropolitan Statistical Areas, metropolitan and micropolitan statistical areas are delineated using counties nationwide. For New England, the standards also identify a complementary set of areas—New England city and town area (NECTAs)—defined using minor civil divisions.

Figure A2

**Metropolitan and Micropolitan New England City and Town Areas (NECTAs)**

As defined by the U.S. Office of Management and Budget, December 2009

Note: Under the Office of Management and Budget's Standards for Defining Metropolitan and Micropolitan Statistical Areas, metropolitan and micropolitan statistical areas are delineated using counties nationwide. For New England, the standards also identify a complementary set of areas-- New England city and town area (NECTAs)-- defined using minor civil divisions.

## Appendix III

# Limitations of the Data

---

**Introduction**— The data presented in this *Statistical Abstract* came from many sources. The sources include not only federal statistical bureaus and other organizations that collect and issue statistics as their principal activity, but also governmental administrative and regulatory agencies, private research bodies, trade associations, insurance companies, health associations, and private organizations such as the National Education Association and philanthropic foundations. Consequently, the data vary considerably as to reference periods, definitions of terms and, for ongoing series, the number and frequency of time periods for which data are available.

The statistics presented were obtained and tabulated by various means. Some statistics are based on complete enumerations or censuses while others are based on samples. Some information is extracted from records kept for administrative or regulatory purposes (school enrollment, hospital records, securities registration, financial accounts, social security records, income tax returns, etc.), while other information is obtained explicitly for statistical purposes through interviews or by mail. The estimation procedures used vary from highly sophisticated scientific techniques, to crude “informed guesses.”

Each set of data relates to a group of individuals or units of interest referred to as the *target universe* or *target population*, or simply as the *universe* or *population*.

Prior to data collection the target universe should be clearly defined. For example, if data are to be collected for the universe of households in the United States, it is necessary to define a “household.” The target universe may not be completely tractable. Cost and other considerations may restrict data collection to a *survey universe* based on some available list, such list may be inaccurate or out of date. This list is called a *survey frame* or *sampling frame*.

The data in many tables are based on data obtained for all population units, a *census*, or on data obtained for only a portion, or *sample*, of the population units. When the data presented are based on a sample, the sample is usually a scientifically selected *probability sample*. This is a sample selected from a list or sampling frame in such a way that every possible sample has a known chance of selection and usually each unit selected can be assigned a number, greater than zero and less than or equal to one, representing its likelihood or probability of selection.

For large-scale sample surveys, the probability sample of units is often selected as a multistage sample. The first stage of a multistage sample is the selection of a probability sample of large groups of population members, referred to as primary sampling units (PSUs). For example, in a national multistage household sample, PSUs are often counties or groups of counties. The second stage of a multistage sample is the selection, within each PSU selected at the first stage, of smaller groups of population units, referred to as secondary sampling units. In subsequent stages of selection, smaller and smaller nested groups are chosen until the ultimate sample of population units is obtained. To qualify a multistage sample as a probability sample, all stages of sampling must be carried out using probability sampling methods.

Prior to selection at each stage of a multistage (or a single stage) sample, a list of the sampling units or sampling frame for that stage must be obtained. For example, for the first stage of selection of a national household sample, a list of the counties and county groups that form the PSUs must be obtained. For the final stage of selection, lists of households, and sometimes persons within the households, have to be compiled in the field. For surveys of economic entities and for the economic censuses the U.S. Census Bureau generally uses a frame constructed

from the Bureau's Business Register. The Business Register contains all establishments with payroll in the United States including small single establishment firms as well as large multi-establishment firms.

Wherever the quantities in a table refer to an entire universe, but are constructed from data collected in a sample survey, the table quantities are referred to as *sample estimates*. In constructing a sample estimate, an attempt is made to come as close as is feasible to the corresponding universe quantity that would be obtained from a complete census of the universe. Estimates based on a sample will, however, generally differ from the hypothetical census figures. Two classifications of errors are associated with estimates based on sample surveys:

- (1) *sampling error*—the error arising from the use of a sample, rather than a census, to estimate population quantities and
- (2) *nonsampling error*—those errors arising from nonsampling sources. As discussed below, the magnitude of the sampling error for an estimate can usually be estimated from the sample data. However, the magnitude of the nonsampling error for an estimate can rarely be estimated. Consequently, actual error in an estimate exceeds the error that can be estimated.

The particular sample used in a survey is only one of a large number of possible samples of the same size which could have been selected using the same sampling procedure. Estimates derived from the different samples would, in general, differ from each other. The *standard error* (SE) is a measure of the variation among the estimates derived from all possible samples. The standard error is the most commonly used measure of the sampling error of an estimate. Valid estimates of the standard errors of survey estimates can usually be calculated from the data collected in a probability sample. For convenience, the standard error is sometimes expressed as a percent of the estimate and is called the relative standard error or *coefficient of variation* (CV). For example, an estimate of 200 units with an esti-

mated standard error of 10 units has an estimated CV of 5 percent.

A sample estimate and an estimate of its standard error or CV can be used to construct interval estimates that have a prescribed confidence that the interval includes the average of the estimates derived from all possible samples with a known probability. To illustrate, if all possible samples were selected under essentially the same general conditions, and using the same sample design, and if an estimate and its estimated standard error were calculated from each sample, then: 1) approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average estimate derived from all possible samples; 2) approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average estimate derived from all possible samples; and 3) approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average estimate derived from all possible samples.

Thus, for a particular sample, one can say with the appropriate level of confidence (e.g., 90 percent or 95 percent) that the average of all possible samples is included in the constructed interval. Example of a confidence interval: An estimate is 200 units with a standard error of 10 units. An approximately 90 percent confidence interval (plus or minus 1.6 standard errors) is from 184 to 216.

All surveys and censuses are subject to nonsampling errors. Nonsampling errors are of two kinds—*random* and *nonrandom*. Random nonsampling errors arise because of the varying interpretation of questions (by respondents or interviewers) and varying actions of coders, keyers, and other processors. Some randomness is also introduced when respondents must estimate. Nonrandom nonsampling errors result from total nonresponse (no usable data obtained for a sampled unit), partial or item nonresponse (only a portion of a response may be usable), inability or unwillingness on the part of respondents to provide correct information, difficulty

interpreting questions, mistakes in recording or keying data, errors of collection or processing, and coverage problems (overcoverage and undercoverage of the target universe). Random nonresponse errors usually, but not always, result in an understatement of sampling errors and thus an overstatement of the precision of survey estimates. Estimating the magnitude of nonsampling errors would require special experiments or access to independent data and, consequently, the magnitudes are seldom available.

Nearly all types of nonsampling errors that affect surveys also occur in complete censuses. Since surveys can be conducted on a smaller scale than censuses, nonsampling errors can presumably be controlled more tightly. Relatively more funds and effort can perhaps be expended toward eliciting responses, detecting and correcting response error, and reducing processing errors. As a result, survey results can sometimes be more accurate than census results.

To compensate for suspected nonrandom errors, adjustments of the sample estimates are often made. For example, adjustments are frequently made for nonresponse, both total and partial. Adjustments made for either type of nonresponse are often referred to as *imputations*. Imputation for total nonresponse is usually made by substituting for the questionnaire responses of the nonrespondents the “average” questionnaire responses of the respondents. These imputations usually are made separately within various groups of sample members, formed by attempting to place respondents and nonrespondents together that have “similar” design or ancillary characteristics. Imputation for item nonresponse is usually made by substituting for a missing item the response to that item of a respondent having characteristics that are “similar” to those of the nonrespondent.

For an estimate calculated from a sample survey, the *total error* in the estimate is composed of the sampling error, which can usually be estimated from the sample, and the nonsampling error, which usually cannot be estimated from the sample. The total error present in a population

quantity obtained from a complete census is composed of only nonsampling errors. Ideally, estimates of the total error associated with data given in the *Statistical Abstract* tables should be given. However, due to the unavailability of estimates of nonsampling errors, only estimates of the levels of sampling errors, in terms of estimated standard errors or coefficients of variation, are available. To obtain estimates of the estimated standard errors from the sample of interest, obtain a copy of the referenced report which appears at the end of each table.

*Source of Additional Material:* The Federal Committee on Statistical Methodology (FCSM) is an interagency committee dedicated to improving the quality of federal statistics <<http://www.fcsm.census.gov>>.

**Principal data bases**—Beginning below are brief descriptions of 35 of the sample surveys and censuses that provide a substantial portion of the data contained in this *Abstract*.

## **U.S. DEPARTMENT OF AGRICULTURE, National Agriculture Statistics Service**

### **Census of Agriculture**

*Universes, Frequency, and Types of Data:*  
Complete count of U.S. farms and ranches conducted once every 5 years with data at the national, state, and county level. Data published on farm numbers and related items/ characteristics.

*Type of Data Collection Operation:*  
Complete census for number of farms; land in farms; farm income; agriculture products sold; farms by type of organization; total cropland; irrigated land; farm operator characteristics; livestock and poultry inventory and sales; and selected crops harvested. Market value of land, buildings, and products sold, total farm production expenses, machinery and equipment, and fertilizer and chemicals.

*Data Collection and Imputation Procedures:* Data collection is by mailing questionnaires to all farmers and

ranchers. Producers can return their forms by mail or online. Nonrespondents are contacted by telephone and correspondence follow-ups. Imputations were made for all nonresponse item/characteristics and coverage adjustments were made to account for missed farms and ranches. The response rate for the 2007 Census was 85.2 percent.

*Estimates of Sampling Error:* Weight adjustments were made to account for the undercoverage and whole-unit nonresponse of farms on the Census Mail List (CML). These were treated as sampling errors.

*Other (nonsampling) Errors:* Nonsampling errors are due to incompleteness of the census mailing list, duplications on the list, respondent reporting errors, errors in editing reported data, and in imputation for missing data. Evaluation studies are conducted to measure certain nonsampling errors such as list coverage and classification error. It is a reasonable assumption that the net effect of non measurable errors is zero (the positive errors cancel the negative errors).

*Sources of Additional Material:*  
U.S. Department of Agriculture (NASS), 2007 Census of Agriculture, Appendix A-1 Census of Agriculture Methodology, Appendix B-1 General Explanation and Census of Agriculture Report Form.

### **Basic Area Frame Sample**

*Universe, Frequency, and Types of Data:*  
The June Agricultural Survey collects data on planted acreage and livestock inventories on all land in the 48 contiguous states and Hawaii. The survey also serves to measure list incompleteness and is subsampled for multiple frame surveys.

*Type of Data Collection Operation:*  
Stratified probability sample of about 11,000 land area units of about 1 sq. mile (range from 0.1 sq. mile in cities to several sq. miles in open grazing areas). Sample represents 42,000 operating arrangements. About 20 percent of the sample replaced annually.

*Data Collection and Imputation Procedures:* Data collection is by personal enumeration. Imputation is based on enumerator observation or data reported by respondents having similar agricultural characteristics.

*Estimates of Sampling Error:* Estimated CVs range from 1 percent to 2 percent for regional estimates to 3 percent to 6 percent for state estimates of major crop acres and livestock inventories.

*Other (nonsampling) Errors:* Minimized through rigid quality controls on the collection process and careful review of all reported data.

*Sources of Additional Material:*  
U.S. Department of Agriculture, National Agricultural Statistics Service, USDA's National Agricultural Statistics Service: The Fact Finders of Agriculture, March 2007.

### **Multiple Frame Surveys**

*Universe, Frequency, and Types of Data:*  
Surveys of U.S. farm operators to obtain data on major livestock inventories, selected crop acreage and production, grain stocks, and farm labor characteristics, farm economic data, and chemical use data. Estimates are made quarterly, semi-annually, or annually depending on the data series.

*Type of Data Collection Operation:* Primary frame is obtained from general or special purpose lists, supplemented by a probability sample of land areas used to estimate for list incompleteness.

*Data Collection and Imputation Procedures:* Mail, telephone, or personal interviews used for initial data collection. Mail nonrespondent follow-up by phone and personal interviews. Imputation based on average of respondents.

*Estimates of Sampling Error:* Estimated CVs range from 1 percent to 2 percent at the U.S. level for crop and livestock data series and 3 to 5 percent for economic data. Regional CVs range from 3 to 6 percent, while state estimate CVs run 5 to 10 percent.

*Other (nonsampling) Errors:* In addition to above, replicated sampling procedures used to monitor effects of changes in survey procedures.

*Sources of Additional Material:* U.S. Department of Agriculture, National Agricultural Statistics Service), USDA's National Agricultural Statistics Service: The Fact Finders of Agriculture, March 2007.

### **Objective Yield Surveys**

*Universe, Frequency, and Types of Data:* Monthly surveys during the growing season of corn, cotton, potatoes, soybeans, and winter wheat fields in top producing states for forecasting and estimating yield per acre.

*Type of Data Collection Operation:* Random location of plots in probability sample. Corn, cotton, and soybeans, are selected in June from Basic Area Frame Sample (see above). Winter wheat and potatoes are selected from March and June multiple frame surveys, respectively.

*Data Collection and Imputation Procedures:* Enumerators count and measure plant characteristics in sample fields. Production is measured from plots at harvest. Harvest loss is measured from post harvest gleanings.

*Estimates of Sampling Error:* CVs for national estimates of production are about 2 to 3 percent.

*Other (nonsampling) Errors:* In addition to above, replicated sampling procedures are used to monitor effects of changes in survey procedures.

*Sources of Additional Material:* U.S. Department of Agriculture, National Agricultural Statistics Service), USDA's National Agricultural Statistics Service: The Fact Finders of Agriculture, March 2007.

## **U.S. BUREAU OF JUSTICE STATISTICS (BJS)**

### **National Crime Victimization Survey**

*Universe, Frequency, and Types of Data:* Monthly survey of individuals and households in the United States to obtain data on criminal victimization of those units for compilation of annual estimates.

*Type of Data Collection Operation:* National probability sample survey of about 46,000 interviewed households in 203 PSUs every 6 months selected from a list of addresses from the 2000 census, supplemented by new construction permits and an area sample where permits are not required.

*Data Collection and Imputation Procedures:* Interviews are conducted every 6 months for 3 years for each household in the sample; 7,700 households are interviewed monthly. Personal interviews are used in the first interview; the intervening interviews are conducted by telephone whenever possible.

*Estimates of Sampling Error:* CVs for 2009 are 4 percent for crimes of violence; 19.1 percent for estimate of rape/sexual assault counts; 10.2 percent for robbery counts; 4.7 percent for assault counts; 18.6 percent for purse snatching/pocket picking; 2.2 percent for property crimes; 4.2 percent for burglary counts; 2.5 percent for theft (of property); and 7.3 percent for motor vehicle theft counts.

*Other (nonsampling) Errors:* Respondent recall errors which may include reporting incidents for other than the reference period; interviewer coding and processing errors; and possible mistaken reporting or classifying of events. Adjustment is made for a household noninterview rate of about 8 percent and for a within-household noninterview rate of 13 percent.

*Sources of Additional Material:* U.S. Bureau of Justice Statistics, *Criminal Victimization in the United States*, annual.

## U.S. BUREAU OF LABOR STATISTICS

### Consumer Expenditure Survey (CE)

#### *Universe, Frequency and Types of Data:*

Consists of two continuous components: a quarterly interview survey and a weekly diary or recordkeeping survey. They are nationwide surveys that collect data on consumer expenditures, income, characteristics, and assets and liabilities. Samples are national probability samples of households that are representative of the civilian noninstitutional population. The surveys have been ongoing since 1980.

*Type of Data Collection Operation:* The Interview Survey is a panel rotation survey. Each panel is interviewed for five quarters and then dropped from the survey. About 15,000 consumer units are interviewed each quarter. The Diary Survey sample is new each year and consists of about 3,200 consumer units. Data are collected on an ongoing basis in 91 areas of the country.

*Data Collection and Imputation Procedures:* For the Interview Survey, data are collected by personal interview with each consumer unit interviewed once per quarter for five consecutive quarters. Designed to collect information that respondents can recall for 3 months or longer, such as large or recurring expenditures. For the Diary Survey, respondents record all their expenditures in a self-reporting diary for two consecutive one-week periods. Designed to pick up items difficult to recall over a long period, such as detailed food expenditures. Missing or invalid attributes, expenditures, or incomes are imputed. Assets and liabilities are not imputed. The U.S. Census Bureau collects the data for the Bureau of Labor Statistics.

*Estimates of Sampling Error:* Standard error tables are available since 2000.

*Other (nonsampling) Errors:* Includes incorrect information given by respondents, data processing errors,

interviewer errors, and so on. They occur regardless of whether data are collected from a sample or from the entire population.

#### *Sources of Additional Material:*

Bureau of Labor Statistics, see Internet site <<http://www.bls.gov/cex>>.

### Consumer Price Index (CPI)

#### *Universe, Frequency, and Types of Data:*

A monthly survey of price changes of all types of consumer goods and services purchased by urban wage earners and clerical workers prior to 1978, and urban consumers thereafter. Both indexes continue to be published.

*Type of Data Collection Operation:* Prior to 1978, and since 1998, sample of various consumer items in 87 urban areas; from 1978–1997, in 85 PSUs, except from January 1987 through March 1988, when 91 areas were sampled.

*Data Collection and Imputation Procedures:* Prices of consumer items are obtained each month from about 25,500 retail outlets and from about 4,000 housing units in 87 areas. Prices of food, fuel, and a few other items are obtained monthly; prices of most other commodities and services are collected every month in the three largest geographic areas and every other month in others.

*Estimates of Sampling Error:* Estimates of standard errors are available.

*Other (nonsampling) Errors:* Errors result from inaccurate reporting, difficulties in defining concepts and their operational implementation, and introduction of product quality changes and new products.

#### *Sources of Additional Material:*

U.S. Bureau of Labor Statistics, Internet site <<http://www.bls.gov/cpi/home.htm>> and BLS Handbook of Methods, Chapter 17, see Internet site <http://www.bls.gov/opub/hom/pdf/homch17.pdf>>.

## **Current Employment Statistics (CES) Program**

### *Universe, Frequency, and Types of Data:*

Monthly survey drawn from a sampling frame of roughly 8.9 million unemployment insurance tax accounts in order to obtain data by industry on employment, hours, and earnings.

### *Type of Data Collection Operation:*

In 2009, the CES sample included about 140,000 businesses and government agencies, which represent approximately 410,000 individual worksites.

### *Data Collection and Imputation Procedures:*

Each month, the state agencies cooperating with BLS, as well as BLS Data Collection Centers, collect data through various automated collection modes and mail. BLS Washington staff prepares national estimates of employment, hours, and earnings while states use the data to develop state and area estimates.

*Estimates of Sampling Errors:* The relative standard error for total nonfarm employment is 0.1 percent. From April 2008 to March 2009, the cumulative net birth/death model added 779,000.

*Other (nonsampling) Errors:* Estimates of employment adjusted annually to reflect complete universe. Average adjustment is 0.3 percent over the last decade, with an absolute range from than 0.1 percent to 0.7 percent.

### *Sources of Additional Material:*

U.S. Bureau of Labor Statistics, Employment and Earnings, monthly, Explanatory Notes and Estimates of Errors, Tables 2-A through 2-F. See <<http://www.bls.gov/web/cestntab.htm>>.

## **National Compensation Survey (NCS)**

### *Universe, Frequency, and Types of Data:*

NCS collects data from establishments of all employment-size classes in private industries as well as state and local governments. The survey stratifies its data by geographic area and industry. NCS collects data on work schedules, wages, salaries, and employer costs for

employee benefits. For approximately 80 metropolitan areas and the nation, NCS produces information on workers' earnings and benefits in a variety of occupations at different work levels. NCS is also responsible for two quarterly releases: the Employment Cost Index (ECI), which measures percent changes in the cost of employment, and the Employer Costs for Employee Compensation (ECEC), which measures costs per hour worked for individual benefits. The survey provides data by industry sector, industry division, occupational group, bargaining status, metropolitan area status, census region, and census division. ECEC also provides data by establishment-size class.

*Type of Data Collection Operation:* Establishments are selected for the survey based on a probability-proportionate-to-employment technique. NCS replaces its sample on a continual basis. Private industry establishments are in the survey for approximately 5 years.

### *Data Collection and Imputation Procedures:*

A personal visit to the establishment is the initial source for collecting data. Communication via mail, fax, and telephone provide quarterly updates. Imputation is done for individual benefits.

*Estimates of Sampling Error:* NCS uses standard errors to evaluate published series. These standard errors are available at <<http://www.bls.gov/ncs/ect/home.htm>>.

*Other (nonsampling) Errors:* Nonsampling errors have a number of potential sources. The primary sources are (1) survey nonresponse and (2) data collection and processing errors. Nonsampling errors are not measured. The use of quality assurance programs reduces the potential for nonsampling errors. These programs include the use of reinterviews, interview observations, and the systematic professional review of reports. The programs also serve as a training device that provides feedback on errors for field economists (or data collectors). Quality assurance programs also provide information on sources

of error. This information is used to improve procedures that result in fewer errors. NCS also conducts extensive training of field economists to maintain high standards in data collection.

*Sources of Additional Material:* Bureau of Labor Statistics, *BLS Handbook of methods*, Chapter 8 <<http://www.bls.gov/opub/hom/pdf/homch8.pdf>>.

### **Producer Price Index (PPI)**

*Universe, Frequency, and Types of Data:* Monthly survey of producing companies to determine price changes of all commodities and services produced in the United States for sale in commercial transactions. Data on agriculture, forestry, fishing, manufacturing, mining, gas, electricity, construction, public utilities, wholesale trade, retail trade, transportation, healthcare, and other services.

*Type of Data Collection Operation:* Probability sample of approximately 30,000 establishments that result in about 120,000 price quotations per month.

*Data Collection and Imputation Procedures:* Data are collected by mail and facsimile. Missing prices are estimated by those received for similar products or services. Some prices are obtained from trade publications, organized exchanges, and government agencies. To calculate index, price changes are multiplied by their relative weights taken from the Census Bureau's 2002 shipment values from their Census of Industries.

*Estimates of Sampling Error:*  
Not applicable.

*Other (nonsampling) Errors:*  
Not available at present.

*Sources of Additional Material:* U.S. Bureau of Labor Statistics, *BLS Handbook of Methods*, Chapter 14, Bulletin 2490. U.S. Bureau of Labor Statistics Internet site <<http://stats.bls.gov/ppi>>.

## **BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM**

### **Survey of Consumer Finances**

*Universe, Frequency, and Types of Data:* Periodic sample survey of families. In this survey a given household is divided into a primary economic unit and other economic units. The primary economic unit, which may be a single individual, is generally chosen as the person or couple who either holds the title to the home or is listed on the lease, along with all other people in the household who are financially interdependent with that person or couple. The primary economic unit is used as the reference family. The survey collects detailed data on the composition of family balance sheets, the terms of loans, and relationships with financial institutions. It also gathers information on the employment history and pension rights of the survey respondent and the spouse or partner of the respondent.

*Type of Data Collection Operation:* The survey employs a two-part strategy for sampling families. Some families are selected by standard multistage area probability sampling methods applied to all 50 states. The remaining families in the survey are selected using statistical records derived from tax returns, under the strict rules governing confidentiality and the rights of potential respondents to refuse participation.

*Data Collection and Imputation Procedures:* National Opinion Research Center (NORC) at the University of Chicago has collected data for the survey since 1992. Since 1995, the survey has used computer-assisted personal interviewing. Adjustments for nonresponse are made through multiple imputation of unanswered questions and through weighting adjustments based on data used in the sample design for families that refused participation.

*Estimates of Sampling Error:* Because of the complex design of the survey, the estimation of potential sampling errors is not straightforward. A replicate-based procedure is available.

*Other (nonsampling) Errors:* The survey aims to complete 4,500 interviews, with about two thirds of that number deriving from the area-probability sample. The response rate is typically about 70 percent for the area-probability sample and about 35 percent over all strata in the tax-data sample. Proper training and monitoring of interviewers, careful design of questionnaires, and systematic editing of the resulting data were used to control inaccurate survey responses.

*Sources of Additional Material:* Board of Governors of the Federal Reserve System, "Recent Changes in U.S. Family Finances: Evidence from the Survey of Consumer Finances," *Federal Reserve Bulletin*, 2010, <<http://www.federalreserve.gov/Pubs/Bulletin>>.

## **U.S. CENSUS BUREAU**

### **2007 Economic Census**

(Industry Series, Geographic Area Series and Subject Series Reports) (for NAICS sectors 21 to 81).

*Universe, Frequency, and Types of Data:* Conducted every 5 years to obtain data on number of establishments, number of employees, payroll, total sales/receipts/revenue, and other industry-specific statistics. The universe is all establishments with paid employees excluding agriculture, forestry, fishing and hunting, and government. (Non-employer Statistics, discussed separately, covers those establishments without paid employees.)

Changes for 2007 included tabulations to include Census designated places (unincorporated places), expanded Survey of Business Owners data, data on franchising for more industries, and complete implementation of the North American Product Classification System (NAPCS).

*Type of Data Collection Operation:* All large employer firms were surveyed (i.e., all employer firms above payroll-size cutoffs established to separate large from small employers) plus,

in most sectors, a sample of the small employer firms.

*Data Collection and Imputation Procedures:* Mail questionnaires were used with both mail and telephone follow-ups for nonrespondents. Businesses also had the option to respond electronically. Data for nonrespondents and for small employer firms not mailed a questionnaire were obtained from administrative records of other federal agencies or imputed.

### *Estimates of Sampling Error:*

Not applicable for basic data such as sales, revenue, receipts, payroll, etc. for sectors other than Construction (NAICS 23). Estimates of sampling error for construction industries are included with the data as published on the Census Bureau web site. Other (nonsampling) errors: establishment response rates by NAICS sector in 2002 ranged from 80 percent to 89 percent. Nonsampling errors may occur during the collection, reporting, keying, and classification of the data.

### *Sources of Additional Material:*

U.S. Census Bureau, see <<http://www.census.gov/econ/census07/www/methodology/>>.

## **American Community Survey (ACS)**

*Universe, Frequency, and Types of Data:* Nationwide survey to obtain annual data about demographic, social, economic, and housing characteristics of housing units and the people residing in them. It covers the household population and, beginning in 2006, also includes the group quarter population living in correctional facilities, skilled-nursing homes, military barracks, college residence halls, and other group quarters.

*Type of Data Collection Operation:* Housing unit address sampling is performed twice a year in both August and January. First-phase of sampling defines the universe for the second stage of sampling through two steps. First, all addresses that were eligible for the second-phase sampling within the past four years are excluded from eligibility. This ensures that no address is in

sample more than once in any 5-year period. The second step is to select a 20 percent systematic sample of “new” units, i.e. those units that have never appeared on a previous Master Address File (MAF) extract. All new addresses are systematically assigned to either the current year or to one of four back-samples. This procedure maintains five equal partitions of the universe. The second-phase sampling is done on the current year’s partition and results in approximately 3,000,000 housing unit addresses in the U.S. and 36,000 in Puerto Rico (PR). **Group quarter sampling** is performed separately from the housing unit sampling. The sampling begins with separating the small (15 persons or fewer) and the large (more than 15 persons) group quarters. The target sampling rate for both groups is a 2.5% sample of the group quarters population. It results in approximately 200,000 group quarter residents being selected in the U.S., and an additional 1,000 in Puerto Rico.

*Data Collection and Imputation Procedures:* The American Community Survey is conducted every month on independent samples. The data collection operation for housing units (HUs) consists of three modes or phases: mail, telephone, and personal visit. For the first phase, each housing unit in the independent monthly samples is mailed a pre-notice letter announcing the selection of the address to participate, a survey questionnaire package, and a reminder postcard. These sample units addresses receive a second (replacement) questionnaire package if the initial questionnaire has not been returned by mid-month. The second phase is for sample addresses for which a questionnaire is not returned in the mail and a telephone number is available is forwarded to telephone centers for follow-up. Interviewers attempt to contact and interview these mail non-response cases by telephone. The third phase is for sample addresses that are still unresponsive after two months of attempts are forwarded for a possible personal visit. Mailable addresses with

neither a response to the mailout nor a telephone interview are sampled at a rate of 1 in 2, 2 in 5, or 1 in 3 based on the expected rate of completed interviews at the tract level. Unmailable addresses are sampled at a rate of 2 in 3. Those addresses selected through this process are assigned to Field Representatives (FRs), who visit the addresses, verify their existence, determine their occupancy status, and conduct interviews. **Collection of group quarters** data is conducted by FR’s only. Their methods include completing the questionnaire while speaking to the resident in person or over the telephone, or leaving paper questionnaires for residents to complete for themselves and then pick them up later. This last option is used for data collection in federal prisons. If needed, a personal interview can be conducted with a proxy, such as a relative or guardian. After data collection is completed, any remaining incomplete or inconsistent information on the questionnaire are imputed during the final automated edit of the collected data.

*Estimates of Sampling Error:* The data in the ACS products are estimates and can vary from the actual values that would have been obtained by conducting a census of the entire population. The estimates from the chosen sample addresses can also vary from those that would have been obtained from a different set of addresses. This variation causes uncertainty, which can be measured using statistics such as standard error, margin of error, and confidence interval. All ACS estimates are accompanied by margin of errors to assist users.

*Other (nonsampling) Errors:* Nonsampling Error—In addition to sampling error, data users should realize that other types of errors may be introduced during any of the various complex operations used to select, collect and process survey data. An important goal of the ACS is to minimize the amount of nonsampling error introduced through coverage issues in the sample list, nonresponse from sample housing units, and transcribing or editing data.

One way of accomplishing this is by finding additional sources of addresses, following up on nonrespondents and maintaining quality control systems.

*Sources of Additional Material:*

U.S. Census Bureau, American Community Survey Web site available on the Internet, <<http://www.census.gov/acs/www/index.html>> U.S. Census Bureau, American Community Survey Accuracy of the Data documents available on the Internet, <[http://www.census.gov/acs/www/data\\_documentation/documentation\\_main/](http://www.census.gov/acs/www/data_documentation/documentation_main/)>.

## **American Housing Survey**

*Universe, Frequency, and Types of Data:*

Conducted nationally in odd numbered years to obtain data on the approximately 124 million occupied or vacant housing units in the United States (group quarters are excluded). Data include characteristics of occupied housing units, vacant units, new housing and mobile home units, financial characteristics, recent mover households, housing and neighborhood quality indicators, and energy characteristics.

*Type of Data Collection Operation:* The national sample was a multistage probability sample with about 57,000 units eligible for interview in 2005. Sample units, selected within 394 PSUs, were surveyed over a 4-month period.

*Data Collection and Imputation Procedures:* For 2005, the survey was conducted by personal interviews. The interviewers obtained the information from the occupants or, if the unit was vacant, from informed persons such as landlords, rental agents, or knowledgeable neighbors.

*Estimates of Sampling Error:* For the national sample, illustrations of the Standard Error (SE) of the estimates are provided in the Appendix D of the 2005 report.

*Other (nonsampling) Errors:* Response rate was about 90 percent. Nonsampling errors may result from incorrect or incomplete responses, errors in

coding and recording, and processing errors. Appendix D of the 2005 report has a complete discussion of the errors.

*Sources of Additional Material:*

U.S. Census Bureau, *Current Housing Reports*, Series H-150 and H-170, *American Housing Survey* see <<http://www.census.gov/hhes/www/ahs.html>>.

## **Annual Survey of Government Employment and Payroll**

*Universe, Frequency, and Types of Data:*

The survey measures the number of state, local and federal civilian government employees and their gross payrolls for the pay period including March 12. The survey is conducted annually except in years ending in '2' and '7', when a census of all state and local governments is done. The survey provides data on full-time and part-time employment, part-time hours worked, full-time equivalent employment, and payroll statistics by governmental function (elementary and secondary education, higher education, police protection, fire protection, financial administration, central staff services, judicial and legal, highways, public welfare, solid waste management, sewerage, parks and recreation, health, hospitals, water supply, electric power, gas supply, transit, natural resources, correction, libraries, air transportation, water transport and terminals, other education, state liquor stores, social insurance administration, and housing and community development).

*Type of Data Collection Operations:* The survey sample was taken from the 2002 Census of Governments and contains approximately 11,000 local government units. These units were sampled from a sampling frame that contained 83,767 local governments (county, city, township, special district, and school districts) in addition to 50 state governments and the District of Columbia. This frame was slightly different from the Annual Finance Survey sampling frame. Forty-two of the state governments provided data

from central payroll records for all or most of their agencies/institutions. Data for agencies and institutions for the remaining state governments were obtained by mail canvass questionnaires. Local governments were also canvassed using a mail questionnaire. However, elementary and secondary school system data in Florida, North Dakota, and Washington were supplied by special arrangements with the state education agency in each of these states. All respondents receiving the mail questionnaire had the option of responding using the Employment Web site developed for reporting data. Approximately 26% of the state agency and local government respondents chose to respond on the Web.

*Editing and Imputation Procedures:* Editing is a process that ensures survey data are accurate, complete, and consistent. Efforts are made at all phases of collection, processing, and tabulation to minimize errors. Although some edits are built into the Internet data collection instrument and the data entry programs, the majority of the edits are performed after the case has been loaded into the Census Bureau's database. Edits consist primarily of two types: consistency and a ratio of the current years reported value to the prior year's value. The consistency edits check the logical relationships of data items reported on the form. For example, if a value exists for employees for a function then a value must exist for payroll also. If part-time employees and payroll are reported then part-time hours must be reported and vice versa. The current year/prior year edits compare data for the number of employees, the function reported for the employees, and the average salary between reporting years. If data fall outside of acceptable tolerance levels, the item is flagged for review. Some additional checks are made comparing data from the Annual Finance Survey to data reported on the Annual Survey of Government Employment and Payroll to verify that employees reported on the Annual Survey of Government Employment and Payroll at a particular function

have a corresponding expenditure on the Finance Survey. For both types of edits, the edit results are reviewed by analysts and adjusted when needed. When the analyst is unable to resolve or accept the edit failure, contact is made with the respondent to verify or correct the reported data.

*Imputation:* Not all respondents answer every item on the questionnaire. There are also questionnaires that are not returned despite efforts to gain a response. Imputation is the process of filling in missing or invalid data with reasonable values in order to have a complete data set. For general purpose governments and for schools, the imputations were based on recent historical data from either a prior year annual survey or the most recent Census of Governments, if it was available. These data were adjusted by a growth rate that was determined by the growth of units that were similar (in size, geography, and type of government) to the nonrespondent. If there was no recent historical data available, the imputations were based on the data from a randomly selected donor that was similar to the nonrespondent. This donor's data were adjusted by dividing each data item by the population (or enrollment) of the donor and multiplying the result by the nonrespondent's population (or enrollment). For special districts, if prior year data are available, the data are brought forward with a national level growth rate applied. Otherwise, the data are imputed to be zero. In cases where good secondary data sources exist, the data from those sources were used.

*Estimates of Sampling Error:* For intercensal surveys, estimated coefficients of variation for all variables are given in tabulations on the Website. For U.S. and state-and-local government-level estimates of total full-time equivalents and total payroll, most relative standard errors are generally less than one percent, but vary considerably for detailed characteristics.

*Other (nonsampling) Errors:* Although every effort is made in all phases of collection, processing, and tabulation

to minimize errors, the sample data are subject to nonsampling errors such as inability to obtain data for every variable from all units in the sample, inaccuracies in classification, response errors, misinterpretation of questions, mistakes in keying and coding, and coverage errors. These same errors may be evident in census collections and may affect the Census of Governments data used to adjust the sample during the estimation phase and used in the imputation process.

*Sources of Additional material:*

<<http://www.census.gov/govs/www/apes/index.html>> and  
<<http://www.census.gov/govs/www/apesstl06.html>>.

## **Annual Survey of Government Finances**

*Universe, Frequency, and Types of Data:*

The United States Census Bureau conducts an Annual Survey of Government Finances, as authorized by law under Title 13, United States Code, Section 182. Alternatively, every 5 years, in years ending in a '2' or '7', a Census of Governments, including a Finance portion, is conducted under Title 13, Section 161. The survey coverage includes all state and local governments in the United States. For both the Census and annual survey, the finance detail data is equivalent, encompassing the entire range of government finance activities—revenue, expenditure, debt, and assets.

*Type of Data Collection Operations:* The data collection phase for the annual survey made use of three methods to obtain data: mail canvass, internet collection, and central collection from State sources. In 28 states, all or part of the general purpose finance data for local governments was obtained from cooperative arrangements between the Census Bureau and a state government agency. These usually involved a data collection effort carried out to meet the needs of both agencies—the state agency for purposes of audit, oversight, or information, and the Census Bureau for statistical purposes. Data for the balance of local governments

in this annual survey were obtained via mail questionnaires sent directly to county, municipal, township, special district, and school district governments. School district data were collected via cooperative arrangements with state education agencies. Data for state governments were compiled by analysts of the Census Bureau, usually with the cooperation and assistance of state officials. The data were compiled from state government audits, budgets, and other financial reports, either in printed or electronic format. The compilation generally involved recasting the state financial records into the classification categories used for reporting by the Census Bureau.

*Data Collection and Imputation Procedures:* Survey is conducted by mail with mail follow-ups of nonrespondents. Imputation for all nonresponse items is based on previous year reports or, for new governments, on data from similar donors.

*Estimates of Sampling Error:* The local government statistics in the intercensal survey years are developed from a sample survey. Therefore, the local totals, as well as aggregates of state and local government data, are considered estimated amounts subject to sampling error. State government finance data are not subject to sampling. Consequently, State-local aggregates shown here have a relative standard error less than or equal to the local government estimates they include. Estimates of major United States totals for local governments are subject to a computed sampling variability of less than one-half of 1 percent. State and local government totals are generally subject to sampling variability of less than 3 percent.

*Other (nonsampling) Errors:* The estimates are also subject to inaccuracies in classification, response, and processing. Efforts were made at all phases of collection, processing, and tabulation to minimize errors. However, the data are still subject to errors from imputations for missing data, errors from misreported data, errors from miscoding, and difficulties in

identifying every unit that should be included in the report. Every effort was made to keep such errors to a minimum through care in examining, editing, and tabulating the data reported by government officials.

*Sources of Additional Material:*

<<http://www.census.gov/govs/index.html>> and <<http://www.census.gov/govs/state/index.html>>.

## **Annual Survey of Manufactures (ASM)**

*Universe, Frequency, and Types of Data:*

The Annual Survey of Manufactures is conducted annually, except for years ending in '2' and '7' for all manufacturing establishments having one or more paid employees. The purpose of the ASM is to provide key intercensal measures of manufacturing activity, products, and location for the public and private sectors. The ASM provides statistics on employment, payroll, worker hours, payroll supplements, cost of materials, value added by manufacturing, capital expenditures, inventories, and energy consumption. It also provides estimates of value of shipments for 1,800 classes of manufactured products.

*Type of Data Collection Operation:* The ASM includes approximately 50,000 establishments selected from the census universe of 346,000 manufacturing establishments. Approximately 24,000 large establishments are selected with certainty, and the remaining 26,000 other establishments are selected with probability proportional to a composite measure of establishment size. The survey is updated from two sources: Internal Revenue Service administrative records are used to include new single-unit manufacturers and the Company Organization Survey identifies new establishments of multiunit forms.

*Data Collection and Imputation Procedures:* Survey is conducted by mail with phone and mail follow-ups of nonrespondents. Imputation (for all nonresponse items) is based on previous year reports, or for new establishments in survey, on industry averages.

*Estimates of Sampling Error:* Estimated relative standard errors for number of employees, new expenditures, and for value added totals are given in annual publications. For U.S. level industry statistics, most estimated relative standard errors are 2 percent or less, but vary considerably for detailed characteristics.

*Other (nonsampling) Errors:* The unit response rate is about 85 percent. Nonsampling errors include those due to collection, reporting, and transcription errors, many of which are corrected through computer and clerical checks.

*Sources of Additional Material:*

U.S. Census Bureau, *Annual Survey of Manufactures*, and Technical Paper 24.

## **Census of Population**

*Universe, Frequency, and Types of Data:*

Complete count of U.S. population conducted every 10 years since 1790. Data obtained on number and characteristics of people in the United States.

*Type of Data Collection Operation:* In the 1990, 2000, and 2010 censuses the 100 percent items included: age, date of birth, sex, race, Hispanic origin, and relationship to householder. In 1980, approximately 19 percent of the housing units were included in the sample; in 1990 and 2000, approximately 17 percent.

*Data Collection and Imputation Procedures:* In 1980, 1990, 2000, and 2010 mail questionnaires were used extensively with personal interviews in the remainder. Extensive telephone and personal follow-up for nonrespondents was done in the censuses. Imputations were made for missing characteristics.

*Estimates of Sampling Error:* Sampling errors for data are estimated for all items collected by sample and vary by characteristic and geographic area. The coefficients of variation (CVs) for national and state estimates are generally very small.

*Other (nonsampling) Errors:* Since 1950, evaluation programs have been

conducted to provide information on the magnitude of some sources of nonsampling errors such as response bias and undercoverage in each census. Results from the evaluation program for the 1990 census indicated that the estimated net undercoverage amounted to about 1.5 percent of the total resident population. For Census 2000, the evaluation program indicated a net overcount of 0.5 percent of the resident population.

*Sources of Additional Material:*

U.S. Census Bureau, *The Coverage of Population in the 1980 Census*, PHC80-E4; *Content Reinterview Study: Accuracy of Data for Selected Population and Housing Characteristics as Measured by Reinterview*, PHC80-E2; *1980 Census of Population*, Vol. 1, (PC80-1), Appendixes B, C, and D. *Content Reinterview Survey: Accuracy of Data for Selected Population and Housing Characteristics as Measured by Reinterview*, 1990, CPH-E-1; *Effectiveness of Quality Assurance*, CPH-E-2; *Programs to Improve Coverage in the 1990 Census*, 1990, CPH-E-3. For Census 2000 evaluations, see <<http://www.census.gov/pred/www>>.

## **County Business Patterns**

*Universe, Frequency, and Types of*

*Data:* County Business Patterns is an annual tabulation of basic data items extracted from the Business Register, a file of all known single- and multi-location employer companies maintained and updated by the U.S. Census Bureau. Data include number of establishments, number of employees, first quarter and annual payrolls, and number of establishments by employment size class. Data are excluded for self-employed individuals, private households, railroad employees, agricultural production workers, and most government employees.

*Type of Data Collection Operation:* The annual Company Organization Survey and the Economic Census provide individual establishment data for multi-location companies. Data for single establishment companies are obtained

from various Census Bureau programs, such as the Annual Survey of Manufactures and Current Business Surveys, as well as from administrative records of the Internal Revenue Service, the Social Security Administration, and the Bureau of Labor Statistics.

*Estimates of Sampling Error:*

Not applicable.

*Other (nonsampling) Errors:* The data are subject to nonsampling errors, such as inability to identify all cases in the universe; definition and classification difficulties; differences in interpretation of questions; errors in recording or coding the data obtained; and estimation of employers who reported too late to be included in the tabulations and for records with missing or misreported data.

*Sources of Additional Material:*

U. S. Census Bureau, *County Business Patterns* <<http://www.census.gov/econ/cbp/index.html>>

## **Current Population Survey (CPS)**

*Universe, Frequency, and Types of Data:*

Nationwide monthly sample designed primarily to produce national and state estimates of labor force characteristics of the civilian noninstitutionalized population 16 years of age and older.

*Type of Data Collection Operation:* Multi-stage probability sample that currently includes 72,000 households from 824 sample areas. Sample size increased in some states to improve data reliability for those areas on an annual average basis. A continual sample rotation system is used. Households are in sample 4 months, out for 8 months, and in for 4 more. Month-to-month overlap is 75 percent; year-to-year overlap is 50 percent.

*Data Collection and Imputation Procedures:* For first and fifth months that a household is in sample, personal interviews; other months, approximately 85 percent of the data collected by phone. Imputation is done for item nonresponse. Adjustment for total nonresponse is done by a predefined cluster of units, by state, metropolitan

status and CBSA size; for item nonresponse imputation varies by subject matter.

*Estimates of Sampling Error:* The national total estimates of the civilian labor force and of employment have monthly CVs of about 0.2 percent and annual average CVs of about 0.1 percent. Unemployment is a much smaller characteristic and consequently has substantially larger CVs than the civilian labor force or employment. The national unemployment rate, the most important CPS statistic, has a monthly CV of about 2 percent and an annual average CV of about 1 percent. Assuming a 6 percent unemployment rate, states have annual average CVs of about 8 percent. The estimated CVs for family income and poverty rate for all persons in 2005 are 0.4 percent and 1.2 percent, respectively. CVs for subnational areas, such as states, tend to be larger and vary by area.

*Other (nonsampling) Errors:* Estimates of response bias on unemployment are available. Estimates of unemployment rate from reinterviews range from -2.4 percent to 1.0 percent of the basic CPS unemployment rate (over a 30-month span from January 2004 through June 2006). Eligible CPS households are approximately 82 percent of the assigned households, with a corresponding response rate of 92 percent.

*Sources of Additional Material:*

U.S. Census Bureau and Bureau of Labor Statistics, Current Population Survey: Design and Methodology, (Technical Paper 66), available on the Internet <<http://www.census.gov/prod/2006pubs/tp-66.pdf>> and the Bureau of Labor Statistics, <<http://www.bls.gov/cps/>> and the *BLS Handbook of Methods*, Chapter 1, available on the Internet at <[http://www.bls.gov/opub/hom/homch1\\_a.htm](http://www.bls.gov/opub/hom/homch1_a.htm)>.

## **Foreign Trade—Export Statistics**

*Universe, Frequency, and Types of Data:*

As of October 1, 2008, the Shipper's Export Declaration (SED) Form 7525-V became obsolete. Electronic Export

Information (EEI) replaced the SED and all export information must be filed through the Automated Export System (AES) by either a United States Principal Party in Interest (USPPI) or an Authorized U.S. agent. The EEI filings are processed each month to obtain data on the movement of U.S. merchandise exports to foreign countries. Data obtained include value, quantity, and shipping weight of exports by commodity, country of destination, district of exportation, and mode of transportation.

*Type of Data Collection Operation:*

USPPIs or Authorized U.S. Agents are required to submit EEI for exportation of merchandise valued over \$2,500. Data for shipments valued under \$2,501 are estimated, based on established percentages of individual country totals.

*Data Collection and Imputation Procedures:*

The EEI filings are received on a daily basis from ports throughout the country and subjected to a monthly processing cycle. They are fully processed to the extent they reflect items valued over \$2,500. Estimates for shipments valued at \$2,500 or less are made, based on established percentages of individual country totals.

*Estimates of Sampling Error:*

Not applicable.

*Other (nonsampling) Errors:* The goods data are a complete enumeration of EEI reported in AES and are not subject to sampling errors; but they are subject to several types of nonsampling errors. Quality assurance procedures are performed at every stage of collection, processing and tabulation; however the data are still subject to several types of nonsampling errors. The most significant of these include reporting errors, undocumented shipments, timeliness, data capture errors, and errors in the estimation of low-valued transactions. The number of data errors and the overall data quality are expected to improve due to the elimination of paper SEDs and the mandatory filing of export data through the AES. Additional

information on errors affecting export data can be found at [http://www.census.gov/foreign-trade/Press-release/current\\_press\\_release/explain.pdf](http://www.census.gov/foreign-trade/Press-release/current_press_release/explain.pdf).

*Sources of Additional Material:* Effect of Mandatory Electronic Filing on Export data, <http://www.census.gov/foreign-trade/aip/mandatoryelectronicfiling.html>, U.S. Census Bureau, FT 900 U.S. International Trade in Goods and Services, FT 925 (discounted after 1996), U.S. Merchandise Trade, FT 895 U.S. Trade with Puerto Rico and U.S. Possessions, FT 920 U.S. Merchandise trade: selected highlights, and Information Section on Goods and Services at <http://www.census.gov/ft900>.

## **Foreign Trade—Import Statistics**

*Universe, Frequency, and Types of Data:* The import entry documents collected by U.S. Customs and Border Protection are processed each month to obtain data on the movement of merchandise imported into the United States. Data obtained include value, quantity, and shipping weight by commodity, country of origin, district of entry, and mode of transportation.

*Type of Data Collection Operation:* Import entry documents, either paper or electronic, are required to be filed for the importation of goods into the United States valued over \$2,000 or for articles which must be reported on formal entries. U.S. Bureau of Customs and Border Protection officials collect and transmit statistical copies of the documents to the Census Bureau on a flow basis for data compilation. Estimates for shipments valued under \$2,001 and not reported on formal entries are based on estimated established percentages for individual country totals.

*Data Collection and Imputation Procedures:* Statistical copies of import entry documents, received on a daily basis from ports of entry throughout the country, are subjected to a monthly processing cycle. They are

fully processed to the extent they reflect items valued at \$2,001 and over or items which must be reported on formal entries.

*Estimates of Sampling Error:* Not applicable.

*Other (nonsampling) Errors:* The goods data are a complete enumeration of documents collected by the U.S. Customs and Border Protection and are not subject to sampling errors; but they are subject to several types of nonsampling errors. Quality assurance procedures are performed at every stage of collection, processing, and tabulation; however the data are still subject to several types of nonsampling errors. The most significant of these include reporting errors, undocumented shipments, timeliness, data capture errors, and errors in the estimation of low-valued transactions. Additional information on errors affecting import data can be found at [http://www.census.gov/foreign-trade/Press-Release/current\\_press\\_release/explain.pdf](http://www.census.gov/foreign-trade/Press-Release/current_press_release/explain.pdf).

*Sources of Additional Material:* U.S. Census Bureau, FT 900 U.S. International Trade in Goods and Services, FT 925 (discounted after 1996), U.S. Merchandise Trade, FT 895 U.S. Trade with Puerto Rico and U.S. Possessions, FT920 U.S. Merchandise Trade: selected highlights, and Information Section on Goods and Services at <http://www.census.gov/ft900>.

## **Monthly Retail Trade and Food Service Survey**

*Universe, Frequency, and Types of Data:* Provides monthly estimates of retail and food service sales by kind of business and end of month inventories of retail stores.

*Type of Data Collection Operation:* Probability sample of all firms from a list frame. The list frame is the Bureau's Business Register updated quarterly for recent birth Employer Identification (EI) Numbers issued by the Internal Revenue Service and assigned a kind of business code by the Social Security

Administration. The largest firms are included monthly; a sample of others is included every month also.

*Data Collection and Imputation Procedures:* Data are collected by mail questionnaire with telephone follow-ups and fax reminders for nonrespondents. Imputation is made for each nonresponse item and each item failing edit checks.

*Estimates of Sampling Error:* For the 2006 monthly surveys, CVs are about 0.4 percent for estimated total retail sales and 0.7 percent for estimated total retail inventories. Sampling errors are shown in monthly publications.

*Other (nonsampling) Errors:* Imputation rates are about 22 percent for monthly retail and food service sales, and 29 percent for monthly retail inventories.

*Sources of Additional Material:* U.S. Census Bureau, Current Business Reports, Annual Revision of Monthly Retail and Food Services: Sales and Inventories.

## **Monthly Survey of Construction**

*Universe, Frequency, and Types of Data:* Survey conducted monthly of newly constructed housing units (excluding mobile homes). Data are collected on the start, completion, and sale of housing. (Annual figures are aggregates of monthly estimates.)

*Type of Data Collection Operation:* A multistage probability sample of approximately 900 of the 20,000 permit-issuing jurisdictions in the U.S. was selected. Each month in each of these permit offices, field representatives list and select a sample of permits for which to collect data. To obtain data in areas where building permits are not required, a multistage probability sample of 80 land areas (census tracts or subsections of census tracts) was selected. All roads in these areas are canvassed and data are collected on all new residential construction found. Sampled buildings are followed up until they are completed (and sold, if for sale).

*Data Collection and Imputation Procedures:* Data are obtained by telephone inquiry and/or field visit. Nonresponse/undercoverage adjustment factors are used to account for late reported data.

*Estimates of Sampling Error:* Estimated CV of 5 percent to 6 percent for estimates of national totals of units started, but may be higher than 20 percent for estimated totals of more detailed characteristics, such as housing units in multiunit structures.

*Other (nonsampling) Errors:* Response rate is over 90 percent for most items. Nonsampling errors are attributed to definitional problems, differences in interpretation of questions, incorrect reporting, inability to obtain information about all cases in the sample, and processing errors.

*Sources of Additional Material:* All data are available on the Internet at <<http://www.census.gov/starts>>, <<http://www.census.gov/newhome-sales>> or <<http://www.census.gov/const/www/newsresconstindex.html>>. Further documentation of the survey is also available at those sites.

## **Nonemployer Statistics**

*Universe, Frequency, and Types of Data:* Nonemployer statistics are an annual tabulation of economic data by industry for active businesses without paid employees that are subject to federal income tax. Data showing the number of firms and receipts by industry are available for the U.S., states, counties, and metropolitan areas. Most types of businesses covered by the Census Bureau's economic statistics programs are included in the nonemployer statistics. Tax-exempt and agricultural-production businesses are excluded from nonemployer statistics.

*Type of Data Collection Operation:* The universe of nonemployer firms is created annually as a byproduct of the Census Bureau's Business Register processing for employer establishments. If a business is active but without paid employees, then it becomes part of the potential nonemployer

universe. Industry classification and receipts are available for each potential nonemployer business. These data are obtained primarily from the annual business income tax returns of the Internal Revenue Service (IRS). The potential nonemployer universe undergoes a series of complex processing, editing, and analytical review procedures at the Census Bureau to distinguish nonemployers from employers, and to correct and complete data items used in creating the data tables.

*Estimates of Sampling Error:*

Not applicable.

*Other (nonsampling) Errors:*

The data are subject to nonsampling errors, such as industry misclassification as well as errors of response, keying, nonreporting, and coverage.

*Sources of Additional Material:*

U. S. Census Bureau, Nonemployer Statistics at <<http://www.census.gov/epcd/nonemployer/index.html>>.

## **Service Annual Survey**

*Universe, Frequency, and Types of Data:*

The U.S. Census Bureau conducts the Service Annual Survey (SAS) to provide nationwide estimates of revenues and expenses for selected service industries. Estimates are summarized by industry classification based on the 2002 North American Industry Classification System (NAICS). The SAS was expanded in 2009. Selected service industries covered by the Service Annual Survey include all or part of the following NAICS sectors: Utilities (NAICS 22), Transportation and Warehousing (NAICS 48–49); Information (NAICS 51); Finance and Insurance (NAICS 52); Real Estate and Rental and Leasing (NAICS 53); Professional, Scientific, and Technical Services (NAICS 54); Administrative and Support and Waste Management and Remediation Services (NAICS 56); Educational Services (NAICS 61); Health Care and Social Assistance (NAICS 62); Arts, Entertainment, and Recreation (NAICS 71); and Other Services, except Public Administration (NAICS 81). Data collected include total revenue, total

expenses, detailed expenses, revenue from e-commerce transactions; and for selected industries, revenue from detailed service products, revenue from exported services, and inventories. For industries with a significant nonprofit component, separate estimates are developed for taxable firms and firms and organizations exempt from federal income taxes. Questionnaires are mailed in January and request annual data for the prior year. Estimates are published approximately 12 months after the initial survey mailing.

*Type of Data Collection Operation:*

The Service Annual Survey estimates are developed from a probability sample of employer firms and administrative records for nonemployers. Service Annual Survey questionnaires are mailed to a probability sample that is periodically reselected from a universe of firms located in the United States and having paid employees. The sample includes firms of all sizes and covers both taxable firms and firms exempt from federal income taxes. Updates to the sample are made on a quarterly basis to account for new businesses. Firms without paid employees, or nonemployers, are included in the estimates through imputation and/or administrative records data provided by other federal agencies. Links to additional information about confidentiality protection, sampling error, nonsampling error, sample design, definitions, and copies of the questionnaires may be found at <<http://www.census.gov/services/index.html>>.

*Estimates of Sampling Error:* The full 2007 Service Annual Survey results, including coefficients of variations (CVs), can be found at <<http://www.census.gov/services/index.html>>. Links to additional information regarding sampling error may be found at <<http://www.census.gov/services/sas/cv.html>>.

*Other (Nonsampling) Errors:* Data are imputed for unit nonresponse, item nonresponse, and for reported data that fails edits. The percent of imputed data

for total revenue for the 2009 Service Annual Survey estimates range from 6.5 percent to 19.3 percent for total revenue estimates computed at the NAICS sector (2-digit NAICS code) level.

*Sources of Additional Material:*

U.S. Census Bureau, Current Business Reports, *Service Annual Survey*, Census Bureau Web site:

<<http://www.census.gov/services/index.html>>.

**Survey of Business Owners (SBO)**

*Universe, Frequency, and Types of Data:*

The Survey of Business Owners (SBO), formerly known as the Surveys of Minority- and Women-Owned Business Enterprises (SMOBE/SWOBE), provides statistics that describe the composition of U.S. businesses by gender, ethnicity, race, and veteran status. Data are presented for businesses owned by American Indians and Alaska Natives, Asians, Blacks, Hispanics, Native Hawaiians and Other Pacific Islanders, Veterans, and Women. All U.S. firms operating during 2007 with receipts of \$1,000 or more, which are classified by the North American Industry Classification System (NAICS) codes 11 through 99, are represented, except for the following: NAICS 111, 112, 4811 (part), 481111, 482, 491, 525, 813, 814, and 92. The lists of all firms (or sample frames) are compiled from a combination of business tax returns and data collected on other economic census reports. The published data include the number of firms, sales and receipts, number of paid employees, and annual payroll. Data are presented by industry classifications, geographic area (states, metropolitan and micropolitan statistical areas, counties, and corporate municipalities [places] including cities, towns, townships, villages, and boroughs), and size of firm (employment and receipts).

*Type of Data Collection Operation:*

The survey is based on a stratified probability sample of approximately 2.3 million firms from a universe of approximately 27.1 million firms. There were 5.7 million firms with paid

employees and 21.4 million firms with no paid employees.

*Data Collection and Imputation*

*Procedures:* Data were collected through a mailout/mailback operation. Compensation for missing data is addressed through reweighting, edit correction, and standard statistical imputation methods.

*Estimates of Sampling Error:*

Sampling error is present in these estimates because they are based on the results of a sample survey and not on an enumeration of the entire universe. Since these estimates are based on a probability sample, it is possible to estimate the sampling variability of the survey estimates. The standard error (SE) provides a measure of the variation. The relative standard error (RSE) or coefficient of variation (CV) provides a measure of the magnitude of the variation relative to the estimate and is calculated as 100 multiplied by the ratio of the estimate to the SE. The CVs for number of firms and receipts at the national level typically range from 0 to 4 percent.

*Other (Nonsampling) Error:* Nonsampling errors are attributed to many sources: inability to obtain information for all cases in the universe, adjustments to the weights of respondents to compensate for nonrespondents, imputation for missing data, data errors and biases, mistakes in recording or keying data, errors in collection or processing, and coverage problems. Explicit measures of the effects of these nonsampling errors are not available. However, it is believed that most of the important operational and data errors were detected and corrected through an automated data edit designed to review the data for reasonableness and consistency. Quality control techniques were used to verify that operating procedures were carried out as specified.

*Sources of Additional Materials:*

U.S. Census Bureau, Survey of Business Owners, <http://www.census.gov/econ/sbo/> U.S. Census Bureau, 2007 Economic Census User Guide:

## U.S. DEPARTMENT OF EDUCATION National Center for Education Statistics

### Integrated Postsecondary Education Data Survey (IPEDS), Completions

#### *Universe, Frequency, and Types of Data:*

Annual survey of all Title IV (federal financial aid) eligible postsecondary institutions to obtain data on enrollments; faculty and staff finances; institutional prices; financial aid; and earned degrees and other formal awards, conferred by field of study, level of degree, sex, and by racial/ethnic characteristics (every other year prior to 1989, then annually).

#### *Type of Data Collection Operation:*

Complete census.

#### *Data Collection and Imputation Procedures:*

Data are collected through a Web-based survey in the fall of every year. Missing data are imputed by using data of similar institutions.

#### *Estimates of Sampling Error:*

Not applicable.

*Other (nonsampling Errors):* For 2009–10, the response rate for degree-granting institutions was 100.0 percent.

#### *Sources of Additional Material:*

U.S. Department of Education, National Center for Education Statistics, *Postsecondary Institutions and Price of Attendance in the United States: Fall 2009 and Degrees and Other Awards Conferred: 2008–09 and 12-month enrollment, 2008–09*.

See <<http://www.nces.ed.gov/ipeds/>>.

### National Household Education Surveys (NHES) Program

#### *Universe, Frequency, and Types of Data:*

The National Household Education Surveys Program is a system of telephone surveys of the noninstitutionalized civilian population of the United States. Surveys in NHES have varying universes of interest depending on the particular survey. Specific topics

covered by each survey are at the NHES Web site <<http://nces.ed.gov/nhes/>>. A list of the surveys fielded as part of NHES, each universe, and the years they were fielded is provided below.

- 1) Adult Education—Interviews were conducted with a representative sample of civilian, noninstitutionalized persons aged 16 and older who were not enrolled in grade 12 or below (1991, 1995, 1999, 2001, 2003, 2005).
- 2) Before- and After-School Programs and Activities—Interviews were conducted with parents of a representative sample of students in grades K through 8 (1999, 2001, 2005).
- 3) Civic Involvement—Interviews were conducted with representative samples of parents, youth, and adults (1996, 1999).
- 4) Early Childhood Program Participation—Interviews were conducted with parents of a representative sample of children from birth through grade 3, with the specific age groups varying by survey year (1991, 1995, 1999, 2001, 2005).
- 5) Household and Library Use—Interviews were conducted with a representative sample of U.S. households (1996).
- 6) Parent and Family Involvement in Education—Interviews were conducted with parents of a representative sample of children age three through grade 12 or in grades K through 12 depending on the survey year (1996, 1999, 2003, and 2007).
- 7) School Readiness—Interviews were conducted with parents of a representative sample of 3–7 year-old children (1993 and 1999) and of 3–5 year old children, not yet in kindergarten, (2007).
- 8) School Safety and Discipline—Interviews were conducted with a representative sample of students in grades 6–12, their parents, and the

parents of a representative sample of students in grades 3–12 (1993).

*Type of Data Collection Operation:*

NHES uses telephone interviews to collect data.

*Data Collection and Imputation Procedures:*

Telephone numbers are selected using random digit dialing (RDD) techniques. Approximately 45,000 to 64,000 households are contacted in order to identify persons eligible for the surveys. Data are collected using computer-assisted telephone interviewing (CATI) procedures. Missing data are imputed using hot-deck imputation procedures.

*Estimates of Sampling Error:*

Unweighted sample sizes range between 2,250 and 55,708. The average root design effects of the surveys in NHES range from 1.1 to 1.5, except for the Adult Education survey of 1991. In 1991, average root design effects for the Adult Education survey ranged from 2.3 to 4.5.

*Other (nonsampling) Errors:*

Because of unit nonresponse and because the samples are drawn from households with telephone instead of all households, nonresponse and/or coverage bias may exist for some estimates. However, both sources of potential bias are adjusted for in the weighting process. Analyses of both potential sources of bias in the NHES collections have been studied and no significant bias has been detected.

*Sources of Additional Material:*

Please see the NHES Web site at <http://nces.ed.gov/nhes>.

## **Schools and Staffing Survey (SASS)**

*Universe, Frequency and Types of Data:*

NCES designed the SASS survey system to emphasize teacher demand and shortage, teacher and administrator characteristics, school programs, and general conditions in schools. SASS also collects data on many other topics, including principals' and teachers' perceptions of school climate and problems in their schools; teacher compensation; district hiring practices;

basic characteristics of the student population; and for the first time, instructional time and teacher and school performance. The SASS has had four core components: the School Questionnaire, the Teacher Questionnaire, the Principal Questionnaire, and the School District Questionnaire. For the 2007–08 SASS, a sample of public charter schools is included in the sample as part of the public school questionnaire. Since 1987–88, the SASS is the largest, most extensive survey of K through 12 school districts, schools, teachers, and administrators in the U.S. Surveys have been conducted every 3 to 4 years depending on budgetary constraints. The SASS includes data from public, private, and Bureau of Indian Education (BIE) school sectors. Therefore, the SASS provides a multitude of opportunities for analysis and reporting on elementary and secondary educational issues.

*Type of Data Collection Operation:*

The U.S. Census Bureau performs the data collection and begins by sending advance letters to the sampled Local Education Agencies (LEAs) and schools in August and September of collection years. Beginning in October, questionnaires are delivered by U.S. Census Bureau field representatives. The sampling frame for the public school sample is the most recent Common Core of Data (CCD) school file. CCD is a universe file that includes all elementary and secondary schools in the United States. Schools operated by the Department of Defense or those that offered only kindergarten or pre-kindergarten or adult education were excluded from the SASS sample. The list frame used for the private school sample is the most recent Private School Universe Survey (PSS) list, updated with association lists. An area frame supplement is based on the canvassing of private schools within specific geographical areas. A separate universe of schools funded by the Bureau of Indian Education (BIE) is drawn from the Program Education Directory maintained by the BIE. To avoid duplicates in the BIE files, BIE schools in the CCD school file are treated as public schools.

*Estimates of Sampling Error:* Sample errors can be calculated using replicate weights and Balanced Repeated Replication complex survey design methodology. Errors depend on cell sizes and range from less than 1 percent to over 5 percent (for reasonable cell sizes).

*Other (nonsampling) Errors:* Because of unit nonresponse, bias may exist in some sample cells. However, bias has been adjusted for in the weighting process. Analysis of bias has been studied and no significant bias has been detected.

*Sources of Additional Material:*  
Please see the SASS Web site at  
<<http://nces.ed.gov/surveys/sass/>>.

## **U.S. DEPARTMENT OF JUSTICE, FEDERAL BUREAU OF INVESTIGATION**

### **Uniform Crime Reporting (UCR) Program**

*Universe, Frequency, and Types of Data:*  
Monthly reports on the number of criminal offenses that become known to law enforcement agencies. Data are also collected on crimes cleared by arrest or exceptional means; age, sex, and race of arrestees and for victims and offenders for homicides, number of law enforcement employees, on fatal and nonfatal assaults against law enforcement officers, and on hate crimes reported.

*Type of Data Collection Operation:* Crime statistics are based on reports of crime data submitted either directly to the FBI by contributing law enforcement agencies or through cooperating state UCR Programs.

*Data Collection and Imputation Procedures:* States with UCR programs collect data directly from individual law enforcement agencies and forward reports, prepared in accordance with UCR standards, to the FBI. Accuracy and consistency edits are performed by the FBI.

*Estimates of Sampling Error:*  
Not applicable.

### *Other (nonsampling) Errors:*

During 2008, law enforcement agencies active in the UCR Program represented 94.9 percent of the total population. The coverage amounted to 96.0 percent of the United States population in Metropolitan Statistical Areas, 87.6 percent of the population in cities outside metropolitan areas, and 90.0 percent in nonmetropolitan counties.

*Sources of Additional Material:*  
U.S. Department of Justice, Federal Bureau of Investigation, *Crime in the United States*, annual, *Hate Crime Statistics*, annual, *Law Enforcement Officers Killed and Assaulted*, annual, <<http://www.fbi.gov/ucr/ucr.htm>>.

## **U.S. INTERNAL REVENUE SERVICE**

### **Corporation Income Tax Returns**

*Universe, Frequency, and Types of Data:*  
Annual study of unaudited corporation income tax returns, Forms 1120, 1120-A, 1120-F, 1120-L, 1120-PC, 1120-REIT, 1120-RIC, and 1120S, filed by corporations or businesses legally defined as corporations. Data provided on various financial characteristics by industry and size of total assets, and business receipts.

*Type of Data Collection Operation:*  
Stratified probability sample of approximately 112,000 returns for Tax Year 2008, allocated to sample classes which are based on type of return, size of total assets, size of net income or deficit, and selected business activity. Sampling rates for sample classes varied from 0.25 percent to 100 percent.

*Data Collection and Imputation Procedures:* Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return and to comply with statistical definitions.

*Estimates of Sampling Error:*  
Estimated CVs for Tax Year 2008: Coefficients of variation are published in the 2008 Statistics of Income

Corporation Income Tax Returns, Table 1, by industry group. Sampling rates are contained in Section 3 of the same report.

*Other (nonsampling) Errors:* Nonsampling errors include coverage errors, processing errors, and response errors.

*Sources of Additional Material:*

U.S. Internal Revenue Service, *Statistics of Income, Corporation Income Tax Returns*, annual.

## **Individual Income Tax Returns**

*Universe, Frequency, and Types of Data:*

Annual study of unaudited individual income tax returns, Forms 1040, 1040A, and 1040EZ, filed by U.S. citizens and residents. Data provided on various financial characteristics by size of adjusted gross income, marital status, and by taxable and nontaxable returns. Data by state, based on the population of returns filed, also include returns from 1040NR, filed by nonresident aliens plus certain self employment tax returns.

*Type of Data Collection Operation:* Stratified probability sample of 328,630 returns for tax year 2008. The sample is classified into sample strata based on the larger of total income or total loss amounts, the size of business plus farm receipts, and other criteria such as the potential usefulness of the return for tax policy modeling. Sampling rates for sample strata varied from 0.10 percent to 100 percent.

*Data Collection and Imputation Procedures:* Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

*Estimates of Sampling Error:* Estimated CVs for tax year 2008: Adjusted gross income less deficit 0.08 percent; salaries and wages 0.16 percent; and tax exempt interest received 1.07 percent. (State data not subject to sampling error.)

*Other (nonsampling) Errors:* Processing errors and errors arising from the use of tolerance checks for the data.

*Sources of Additional Material:*

U.S. Internal Revenue Service, *Statistics of Income, Individual Income Tax Returns*, annual, (Publication 1304).

## **Partnership Income Tax Returns**

*Universe, Frequency, and Types of Data:*

Annual study of preaudited income tax returns of partnerships related to financial and tax-related activity during calendar year 2008 and reported on Forms 1065 and 1065B to the IRS in calendar year 2009. Data are provided by industry, based on the NAICS industry coding used by IRS.

*Type of Data Collection Operation:* Stratified probability sample of approximately 34,496 partnership returns from a population of 3.3 million filed during calendar year 2009. The sample is classified based on combinations of industry code, gross receipts, net income or loss, and total assets. Sampling rates vary from 0.04 percent to 100 percent.

*Data Collection and Imputation Procedures:* The sample of tax return records are selected via computer after data are transcribed by IRS and placed on an administrative file. Data are manually adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return. Data not available due to regulations are handled with weighting adjustments.

*Estimates of Sampling Error:* Some of the estimated Coefficients of Variation (the estimated standard error of the total divided by the estimated total) for tax year 2008: For number of partnerships, 0.36 percent; business receipts, 2.63 percent; net income, 2.83 percent; and ordinary business income, 2.23 percent.

*Other (nonsampling) Errors:* The potential exists for coverage error due to unavailable returns; processing errors; and taxpayer reporting errors, since data are preaudit.

*Sources of Additional Material:*

U.S. Internal Revenue Service, *Statistics of Income, Partnership Returns and Statistics of Income Bulletin*, Vol. 28, No. 2 (Fall 2009).

**Sole Proprietorship Income Tax Returns**

*Universe, Frequency, and Types of Data:*

Annual study of unaudited income tax returns of nonfarm sole proprietorships, Form 1040 with business schedules. Data provided on various financial characteristics by industry.

*Type of Data Collection Operation:*

Stratified probability sample of roughly 90,000 sole proprietorships for tax year 2008. The sample is classified based on presence or absence of certain business schedules; the larger of total income or loss; size of business plus farm receipts, and other criteria such as the potential usefulness of the return for tax policy modeling. Sampling rates vary from 0.1 percent to 100 percent.

*Data Collection and Imputation Procedures:*

Computer selection of sample of tax return records. Data adjusted during editing for incorrect, missing, or inconsistent entries to ensure consistency with other entries on return.

*Estimates of Sampling Error:*

Estimated CVs for tax year 2008 are available. For sole proprietorships, total business receipts, 0.53 percent; depreciation 1.21 percent.

*Other (nonsampling) Errors:* Processing errors and errors arising from the use of tolerance checks for the data.

*Sources of Additional Material:*

U.S. Internal Revenue Service, *Statistics of Income, Sole Proprietorship Returns* (for years 1980 through 1983) and *Statistics of Income Bulletin*, Vol. 28, No. 2 (Fall 2008, as well as bulletins for earlier years).

**U.S. NATIONAL CENTER FOR HEALTH STATISTICS (NCHS)**

**National Health Interview Survey (NHIS)**

*Universe, Frequency, and Types of Data:*

Continuous data collection covering the civilian noninstitutional population to obtain information on demographic characteristics, conditions, injuries, impairments, use of health services, health behaviors, and other health topics.

*Type of Data Collection Operation:*

Multistage probability sample of 49,000 households (in 198 PSUs) from 1985 to 1994; 36–40,000 households (358 design PSUs or 449 effective PSUs when divided by state boundaries) from 1995 to 2005; an estimated completed 35,000 households (428 effective PSUs) beginning in 2006.

*Data Collection and Imputation Procedures:*

Some missing data items (e.g., race, ethnicity) are imputed using a hot deck imputation value. Sequential regression models are used to create multiple imputation files for family income. Unit nonresponse is compensated for by an adjustment to the survey weights.

*Estimates of Sampling Error:*

For 2008, medically attended injury episodes rates (crude) in the past 12 months by falling for: females 50.43 (4.30) and males 34.87 (3.73) per 1,000 population; for 2008, injury episodes rates (crude) during the past 12 months inside the home—27.90 (2.28) per 1,000 population.

*Other (nonsampling) Errors:*

The response rate was 93.8 percent in 1996; in 2008, the total household response rate was 84.9 percent, with the final family response rate of 84.5 percent, and the final sample adult response rate of 62.6 percent. (Note: the NHIS questionnaire was redesigned in 1997, and a new sample design was instituted in 2006).

*Sources of Additional Material:* National Center for Health Statistics, Summary Health Statistics for the U.S. Population: National Health Interview Survey, 2009, Vital and Health Statistics, Series 10, No. 248; National Center for Health Statistics, Summary Health Statistics for U.S. Children: National Health Interview Survey, 2009, Vital and Health Statistics, Series 10, No. 247; National Center for Health Statistics, Summary Health Statistics for U.S. Adults: National Health Interview Survey, 2009, Vital and Health Statistics, Series 10, No. 249; U.S. National Center for Health Statistics, Design and Estimation for the National Health Interview Survey, 1995–2004, Vital and Health Statistics, Series 2, No. 130.

### **National Survey of Family Growth (NSFG)**

*Universe, Frequency, and Types of Data:* Periodic survey of men and women 15–44 years of age in the household population of the United States. Interviews were conducted in 2002 in person by trained female interviewers. Interview topics covered include births and pregnancies, marriage, divorce, and cohabitation, sexual activity, contraceptive use, and medical care. For men, data on father involvement with children were collected. The most sensitive data—on sexual behavior related to HIV and Sexually Transmitted Disease risk—were collected in a self-administered form in which the data are entered into a computer.

*Type of Data Collection Operation:* In the 2002 (Cycle 6) NSFG, the sample was a multistage area probability sample of men and women 15–44 years of age in the household population of the United States. Only one person 15–44 was selected from households with one or more persons 15–44. Data were collected and entered into laptop (notebook) computers. In the self-administered portion, the respondent entered his or her own answers into the computer. Sample included 12,571 interviews. The response rate was 79 percent. Hispanic and Black persons, as well as those 15–19 years of age, were sampled at higher rates

than White adults. All percentages and other statistics shown for the NSFG are weighted to make national estimates. The weights adjust for the different rates of sampling for each group, and for nonresponse.

*Data Collection and Imputation Procedures:* When interviews are received, they are reviewed for consistency and quality, and analysis variables (recodes) are created. Missing data on these recodes were imputed using multiple regression techniques and checked again for consistency. Variables indicating whether a value has been imputed (“imputation flags”) are included on the data file.

*Estimates of Sampling Error:* Sampling error codes are included on the data file so that users can estimate sampling errors for their own analyses. Sampling error estimates for nine illustrative analyses are shown on the NSFG Web site at <<http://www.cdc.gov/nchs/nsfg.htm>>. Sampling error estimates are also shown in most NCHS reports.

*Other (nonsampling) Errors:* In any survey, errors can occur because the respondent (the person being interviewed) does not recall the specific fact or event being asked about. The NSFG questionnaire in 2002 was programmed to check the consistency of many variables during the interview, so that the interviewer and respondent had a chance to correct any inconsistent information. Further checking occurred after the interview and during recoding and imputation. Typically, less than 1 percent of cases need imputation because of missing data.

*Sources of Additional Material:* The following references can be found at <<http://www.cdc.gov/nchs/nsfg.htm>>. “National Survey of Family Growth, Cycle 6: Sample Design, Weighting, and Variance Estimation.” *Vital and Health Statistics*, Series 2, Number 142, July 2006. “Plan and Operation of Cycle 6 of the National Survey of Family Growth.” *Vital and Health Statistics*, Series 1, No. 42. August 2005. “Sexual Behavior and Selected Health

Measures: Men and Women 15–44 Years of Age, United States, 2002.” *Advance Data from Vital and Health Statistics*, No. 362, Sept 15, 2005.

## **National Vital Statistics System**

*Universe, Frequency, and Types of Data:* Annual data on births and deaths in the United States.

*Type of Data Collection Operation:* Mortality data based on complete file of death records, except 1972, based on 50 percent sample. Natality statistics 1951–1971, based on 50 percent sample of birth certificates, except a 20 percent to 50 percent sample in 1967, received by NCHS.

*Data Collection and Imputation Procedures:* Reports based on records from registration offices of all states, District of Columbia, New York City, Puerto Rico, Virgin Islands, Guam, American Samoa, and Northern Marianas.

*Estimates of Sampling Error:* For recent years, there is no sampling for these files; the files are based on 100 percent of events registered.

*Other (nonsampling) Errors:* It is believed that more than 99 percent of the births and deaths occurring in this country are registered.

*Sources of Additional Material:* U.S. National Center for Health Statistics, *Vital Statistics of the United States*, Vol. I and Vol. II, annual, and the *National Vital Statistics Reports*. See the NCHS Web site at <<http://www.cdc.gov/nchs/nvss.htm>>.

## **National Highway Traffic Safety Administration (NHTSA)**

### **Fatality Analysis Reporting System (FARS)**

*Universe, Frequency, and Types of Data:* FARS is a census of all fatal motor vehicle traffic crashes that occur throughout the United States including the District of Columbia and Puerto Rico on roadways customarily open to the public. The crash must be reported to the state/jurisdiction and at least

one directly related fatality must occur within thirty days of the crash.

*Type of Data Collection Operation:*

One or more analysts, in each state, extract data from the official documents and enter the data into a standardized electronic database.

*Data Collection and Imputation Procedures:*

Detailed data describing the characteristics of the fatal crash, the vehicles and persons involved are obtained from police crash reports, driver and vehicle registration records, autopsy reports, highway department, etc. Computerized edit checks monitor the accuracy and completeness of the data. The FARS incorporates a sophisticated mathematical multiple imputation procedure to develop a probability distribution of missing blood alcohol concentration (BAC) levels in the database for drivers, pedestrians, and cyclists.

*Estimates of Sampling Error:*

Since this is census data, there are no sampling errors.

*Other (nonsampling) Errors:*

FARS represents a census of all police-reported crashes and captures all data reported at the state level. FARS data undergo a rigorous quality control process to prevent inaccurate reporting. However, these data are highly dependent on the accuracy of the police accident reports. Errors or omissions within police accident reports may not be detected.

*Sources of Additional Material:*

The FARS Coding and Validation Manual, ANSI D16.1 Manual on Classification of Motor Vehicle Traffic Accidents (Sixth Edition).

Appendix V  
**Tables Deleted From the  
2011 Edition of the Statistical Abstract**

---

2011  
Number

Sec. 1. **POPULATION**

- 14 State Resident Population—Projections: 2010 to 2030  
18 Resident Population by Age and State—Projections: 2010 and 2015

Sec. 2. **BIRTHS, DEATHS, MARRIAGES, AND DIVORCES**

- 96 Select Family Planning and Medical Service Use by Women,  
15 to 44 Years of Age: 2002

Sec. 3. **HEALTH AND NUTRITION**

- 136 Personal Health Care Expenditures by Object and Source of Payment: 2008

Sec. 4. **EDUCATION**

- 259 Computers for Student Instruction in Elementary and Secondary Schools:  
2005 to 2006  
284 Average Amount of Aid Received by Aided Undergraduates: 2007 to 2008

Sec. 5. **LAW ENFORCEMENT, COURTS, AND PRISONS**

- 319 Hate Crimes Reported by State: 2008  
320 Persons Arrested by Offense, Sex, and Race: 2008  
322 Arrests—18 Years and Older: 2008  
323 Arrests—Ages Under 18 Years: 2008  
330 U.S. District Courts—Offenders Convicted and Sentenced to Prison and  
Length of Sentence: 2000 and 2006  
331 Suspects in Matters Investigated by U.S. Attorneys by Offense:  
1995 to 2006  
332 Criminal Appeals Filed by Offense: 1995 to 2005

Sec. 6. **GEOGRAPHY AND ENVIRONMENT**

- 389 Normal Daily Mean, Maximum, and Minimum Temperatures—  
Selected Cities  
392 Normal Monthly and Annual Precipitation—Selected Cities

Sec. 7. **ELECTIONS**

- 413 Black Elected Officials by Office, 1970 to 2002, and State, 2002

Sec. 12. **LABOR FORCE, EMPLOYMENT, AND EARNINGS**

590 Labor Force Status of Persons With a Work Disability by Age: 2008

Sec. 15. **BUSINESS ENTERPRISE**

766 Employer Firm Births and Deaths and Business Bankruptcies by State:  
2005 to 2008

Sec. 16. **SCIENCE AND TECHNOLOGY**

817 U.S. and Worldwide Commercial Space Industry Revenue by Type:  
2000 to 2008

Sec. 17. **AGRICULTURE**

825 Farm Operators—Tenure and Characteristics: 2002 and 2007

Sec. 19. **ENERGY AND UTILITIES**

926 Manufacturing Primary Energy Consumption for All Purposes by  
Type of Fuel and Major Industry Group: 2006

Sec. 21. **MANUFACTURERS**

1008 Manufacturers' E-Commerce Shipments by Industry: 2007 and 2008

1009 Manufacturing Employer Costs for Employee Compensation Per Hour  
Worked: 2000 to 2010

1028 Aluminum—Supply, Shipments, and Foreign Trade: 1990 to 2008

1031 Computers and Peripheral Equipment—Shipments: 2008 and 2009

Sec. 24. **INFORMATION AND COMMUNICATIONS**

1130 Media Usage and Consumer Spending: 2003 to 2009

Sec. 30. **INTERNATIONAL STATISTICS**

1364 Percent of Women in National Parliaments by Country: 2009

1402 Household Expenditure on Recreation and Culture as a Percentage of GDP:  
1980 to 2007

- Income, 1321
- Industry, 1322, 1323, 1328
- Labor force and employment, 1321
- Occupations, 1316
- Parks, 1254
- Payroll by industry, 1322, 1328
- Population and/or area, 358, 1313, 1321, 1332
- Prisoners in, 1317
- Public aid, 564, 1318
- Social insurance, 546
- Tourism, 1286
- Unemployment insurance, 559
- Vital statistics, 1314
- Isle of Man. (See Foreign countries.)
- Isobutane, 911
- Israel. (See Foreign countries.)
- Italy. (See Foreign countries.)
- Itemized deductions (taxes), 489, 490, 491

## J

- Jails, (see also Correctional Institutions and Prisons and prisoners), 348, 349
- Jamaica. (See Foreign countries.)
- Japan. (See Foreign countries.)
- Jazz, 1238
- Jersey. (See Foreign countries.)
- Jet fuel, 911, 929
- Jewelry, luggage and leather goods stores, 632, 641
- Jewelry, 727, 737, 739, 1051
- Jewish population. (See Religions.)
- Jobs, 635, 636
  - Search methods, 611, 623
- Jogging, 1249, 1250, 1251
- Jordan. (See Foreign countries.)
- Judiciary, federal, 332
  - Appeals Courts, U.S., 334
  - District Courts, U.S., 333, 336
  - Employees and payrolls, 496
  - Federal outlays, 473
  - Supreme Court, U.S., 331
- Juices, 215, 727
- Juveniles, 326, 335, 340, 341

## K

- Kansas. (See State data.)
- Karaoke, 1240
- Kazakhstan. (See Foreign countries.)
- Kentucky. (See State data.)
- Kenya. (See Foreign countries.)
- Keogh plans, 491, 1170
- Kerosene, 911
- Kidney disease and infections, deaths (See also Nephritis), 117, 118, 119, 196
- Kiribati. (See Foreign countries.)
- Korea. (See Foreign countries.)
- Kuwait. (See Foreign countries.)
- Kyrgyzstan. (See Foreign countries.)

## L

- Laboratories, medical and dental, 160
- Labor force (see also individual industries or occupations):
  - Accidents and fatalities, 657, 658, 659, 660, 661
  - Average pay, states, 647
  - City government, 467
  - Civilian labor force:
    - Asian and Pacific Islander population, 587, 588, 593, 622, 627, 648
    - Asian population, 587, 588, 589, 593, 596, 608, 610, 612, 614, 616, 619, 620, 622, 623, 627, 648, 653, 665
    - Black, African American population, 587, 588, 593, 596, 608, 616, 627
    - Displaced workers, 614
    - Educational attainment, 593, 619, 627
    - Employed, 586, 588, 589, 594, 595, 596, 599, 601, 603, 605, 608, 609, 610, 611, 613, 619, 620
    - Females, 588, 589, 592, 593, 594, 596, 597, 598, 599, 600, 601, 608, 609, 610, 627
    - Foreign-born population, 40, 589
    - High school graduates, dropouts, 274
    - Hispanic origin population, 36, 37, 587, 588, 608, 616, 620
    - Hours worked per day, 640
    - Married couples with children, 601
    - Metropolitan areas, 595
    - Minimum wage workers, 653
    - Multiple job holders, 610, 640
    - Not at work, 604
    - Part-time, 613
    - Participation rates, 587, 588, 593, 594, 597, 598, 599, 600, 1365, 1368
    - Projections, 587, 618, 621
    - Race, 587, 588, 593, 596, 608, 616, 627
    - Reason not in, 615

## Statistical Abstract and Supplements

---

### Printed Products

**Statistical Abstract of the United States: 2012.** Since 1878, the authoritative summary of statistics on the social, political, and economic organization of the United States. Includes a representative selection of statistics widely used by public officials, business analysts, educators, librarians, research workers, and students.

**County and City Data Book: 2007.** The latest in a series of publications that contains data for all counties and cities with a population of 25,000 or more. It also includes 2005 American Community Survey data for incorporated places of 100,000 or more inhabitants. Also included is a complete set of state maps showing all counties, places of 25,000 or more, and metropolitan areas. GPO price: \$75; GPO stock number: 003-024-09073-2. NTIS price: \$34.50; NTIS stock number: PB 2008-105137.

**State and Metropolitan Area Data Book: 2010.** This volume, the seventh in a series, presents a vast array of demographic and economic data for the United States, the 50 states, and the

District of Columbia; metropolitan areas (MAs); also includes selected data for component counties of MAs and population data for central cities of MAs. GPO price: \$54; GPO stock number: 003-024-09082-1. NTIS price: \$54 plus handling fee; NTIS stock number: PB2010-112356.

**GPO orders** may be mailed to: Government Printing Office (GPO), P. O. Box 979050, St. Louis, MO 63197-9000. Payment must accompany order. Telephone: 202-512-1800 or 1-866-512-1800. Fax: 202-512-2104. Publications also available at 732 N. Capitol St., NW, Washington, DC 20401 (telephone: 202-512-0132) and online at <<http://bookstore.gpo.gov>>.

**NTIS orders** may be mailed to: National Technical Information Service (NTIS), 5301 Shawnee Rd. Alexandria, VA 22312. Payment must accompany order. Telephone: 703-605-6000 or 1-800-553-6847. Fax: 703-605-6900. Publications also available online at <<http://www.ntis.gov/products/>>.

### Electronic Products

**Statistical Abstract of the United States on CD-ROM and on the Internet.** Contains more than 1,400 tables found in the printed version as Adobe Acrobat files and Excel spreadsheets. Single copies of CD-ROM are available for free distribution from Customer Services at 1-800-923-8282. Internet version available at <<http://www.census.gov/compendia/statab/>>.

**USA Counties on the Internet.** Features over 6,000 data items for the United

States, states, and counties. Covered topical areas include age, agriculture, banking, building permits, business patterns, crime, earnings, education, elections, employment, government, health, households, housing, income, labor force, manufactures, population, poverty, social programs, trade, veterans, vital statistics, and water use. Available at <<http://censtats.census.gov/usa/usa.shtml>>.

"The Statistical Abstract is incomparable because it guides me to the appropriate data source, i.e., which agency is producing these statistics. Then I can go to that agency for more detail if I need it. Great value also in broadness of coverage."

—University librarian

"I think it's the best value the U.S. Government provides its citizens."

—Researcher,  
National Academy  
of Sciences

"It's a wonderful, single source tool! One of five 'must-haves' for my collection in providing service to the company staff."

—Librarian,  
Market research  
company

The 131st edition of the Statistical Abstract continues a proud tradition of presenting a comprehensive and useful portrait of the social, political, and economic organization of the United States. The 2012 edition provides:

- More than 1,400 tables and graphs that cover a variety of topics, such as decennial population counts, health expenditures, migration of college freshmen, hate crimes, judicial caseloads, hurricanes, congressional apportionment, minority-owned businesses, family farms, and horticultural sales.
- Expanded guide to other sources of statistical information both in print and on the Web.
- Listing of metropolitan and micropolitan areas and their population numbers.

Visit our Web site to:

- Access Adobe Acrobat versions of all 131 editions.
- Download spreadsheet files for each table.
- Link to state and local area statistics, including State and County QuickFacts and the USA Counties database.
